Issue V1.9.0 (2020-07-23)

Preface

Purpose

This Document describes the functions, technical specifications, installation guide and system commissioning of Dobot Magician, making it easy for users to fully understand and use it.

Intended Audience

This document is intended for:

- Customer Engineer
- Sales Engineer
- Installation and Commissioning Engineer
- Technical Support Engineer

Change History

| Date | Change Description |
|------------|--|
| 2020/07/22 | Delete Sliding chapter |
| | Update pictures based on V2 Dobot Magician |
| 2018/09/11 | Update the connection figure between Dobot Magician and sliding rail |
| 2018/06/12 | The first release |

Symbol Conventions

The symbols that may be founded in this document are defined as follows.

| Symbol | Description |
|--------|---|
| | Indicates a hazard with a high level of risk which, if not avoided, could result in death or serious injury |
| | Indicates a hazard with a medium level or low level of risk which, if not avoided, could result in minor or moderate injury, robotic arm damage |
| | Indicates a potentially hazardous situation which, if not avoided, can result in robotic arm damage, data loss, or unanticipated result |
| | Provides additional information to emphasize or supplement important points in the main text |

1. Security Precautions

This topic describes the security precautions that should be noticed when using this product. Please read this document carefully before using the robotic arm for the first time. This product need to be carried out in an environment meeting design specifications, you cannot remold the product without authorization, otherwise it could lead to product failure, and even personal injury, electric shock, fire, etc. The installation personnel, operators, teaching personnel, and programmers of the robotic arm must read this document carefully and use the robotic arm strictly according to the regulations of this document strictly.

1.1 General Security

Robotic arm is an electrical equipment. Non-professional technicians cannot modify the wire, otherwise it is vulnerable to injury the device or the person.

The following security rules should be followed when using the robotic arm.

- You should comply with local laws and regulations when operating the robotic arm. The security precautions in this document are only supplemental to local laws and regulations.
- The **DANGER**, **WARNING**, and **NOTICE** marks in this document are only supplemental to the security precautions.
- Please use the robotic arm in the specified environment scope. If not, exceeding the specifications and load conditions will shorten the service life of the product even damage the equipment.
- Before operating and maintaining the robotic arm, the personnel responsible for the installation, operation and maintenance must be trained to understand the various security precautions and to master the correct methods of operation and maintenance.
- Highly corrosive cleaning is not suited to cleaning the robotic arm. The anodized components are not suitable for immersion cleaning.
- People cannot repair and disassemble the robotic arm without professional training. If there is a problem with the robotic arm, please contact Dobot technical support engineer in time.
- Please comply with the relevant laws to deal with the product which is scrapped, and protect the environment.
- There are small parts in the packing box, Please keep them away from children, to avoid any accidents.
- DO NOT let children play with the robotic arm alone. All processes need to be monitored while running. After processes have finished, please turn off the equipment promptly.
- DO NOT put hands into the workspace of the robotic arm while running, to avoid bruising or pinching.
- Be careful during the robotic arm carrying or installing. Please follow the instructions on

| | Issue V1.9.0 (2020-07-23) | User Guide | Copyright © Yuejiang Technology Co., Ltd. |
|--|---------------------------|------------|---|
|--|---------------------------|------------|---|

the packing box to put down the robotic arm gently and place it correctly in direction of arrow.

- Commissioning of the incomplete machine is prohibited until it has been installed in a machine and the whole machine complies with the provisions of the Machinery Directive (2006/42/EC).
- It is prohibited to modify or remove the nameplates, instructions, icons and marks on the robotic arm and the related equipment.
- Please refer to Dobot Magician User Guide along with the packing box before using.

1.2 Precautions

• Please make the Dobot Magician in the workspace with a 45 °angle between the Forearm and Rear Arm (as shown in Figure 1.1) before starting up. If the LED indicator turns red after starting up, it indicates that the Dobot Magician is at a limited position. Please make the Dobot Magician in the workspace.

Figure 1.1 The Forearm and Rear Arm position

- Dobot Magician will move slowly to the specific position when shutdown. DO NOT put hands into the workspace of the Dobot while running, to avoid bruising or pinching. Only once the LED indicator completely turns off, the Dobot Magician can be powered down.
- If the coordinates of the Dobot Magician shown on the DobotStudio are abnormal, please press the **Reset** button on the back of the base to reset Dobot Magician or click **Home** on the DobotStudio page to perform homing.
 - During resetting, Dobot Magician will disconnect from the PC automatically and the LED indicator on the base turns yellow. About 5 seconds later, if the LED indicator turns green, it indicates that the reset is successful.
 - During homing, Dobot Magician will rotate clockwise to the limited position and then return to the homing point automatically, and the LED indicator on the base turns blue and is blinking. After homing, if there is a beep sound and the LED indicator turns green, it indicates that the homing is successful.
- Please turn off the Dobot Magician completely first before connecting or disconnecting external equipment, such as Bluetooth, WIFI, stick controller, infrared sensor, color sensor, etc. Or, it causes damage to your device.

```
Issue V1.9.0 (2020-07-23)User GuideCopyright © Yuejiang Technology Co., Ltd.
```

- Please wear the lasing protective eyeglass when using the laser module. Please protect your eyes and skin from the laser.
- The heating rod will produce high temperature up to 250°C when using the 3D printing module, please be careful.
- Please DO NOT operate or turn off Dobot Magician when burning firmware, to avoid machine damage.

2. Quick Start

This topic briefly describes how to operate the Dobot Magician with the software DobotStudio, allowing you to quickly know and use the robotic arm. Figure 2.1 shows the process of getting started with the Dobot Magician.

Figure 2.1 The process of getting started with the Dobot Magician

2.1 Connecting Cables to the Dobot Magician

Step 1 Connect the Dobot Magician to your computer with the supplied USB cable, as shown in Figure 2.2.

Figure 2.2 Connect the Dobot Magician to your computer

Step 2 Connect the Dobot Magician to the electrical outlet with the supplied power adapter, as shown in Figure 2.2.

2.2 Installing the DobotStudio

You can control Dobot Magician by DobotStudio to implement functions such as Teaching & Playback, fully programmable applications, and 3D printing. This topic introduces Teaching & Playback.

2.2.1 System Requirements

The DobotStudio supports the following Windows and macOS versions.

- Windows 7, Windows 8, and Windows 10 (This manual is explained based on this version)
- macOS 10.10, macOS 10.11, and macOS 10.12

2.2.2 Obtaining the DobotStudio Package

Before using Dobot Magician, download the Windows DobotStudio package from https://www.dobot.cc/downloadcenter.html. The macOS version is also downloadable in this URL.

2.2.3 Installing the DobotStudio

Prerequisites

The DobotStudio package has been obtained.

Procedure

Step 1Unpack the DobotStudio package to a destination directory.Issue V1.9.0 (2020-07-23)User GuideCopyright © Yuejiang Technology Co., Ltd.

For example, this directory is *Installation Directory***DobotStudio**. You can install the DobotStudio to another location based on site requirements.

Step 2 In the installation directory double-click **DobotStudioSetup.exe**. The **Select Setup Language** dialog box is displayed, as shown in Figure 2.3.

| Select Se | etup Language | \times |
|-----------|---|----------|
| 0 | Select the language to use during the installation: | |
| | Chinese | \sim |
| | OK Cancel | |

Figure 2.3 The Select Setup Language dialog box

Step 3 Choose a setup language such as English, as shown in Figure 2.4. You can also select Chinese if needed.

| Select S | etup Language | \times |
|----------|---|----------|
| 0 | Select the language to use during the installation: | |
| | English | \sim |
| | OK Cancel | |

Figure 2.4 Select English

Step 4 Click OK to follow the on-screen instructions to continue with the installation.During the installation, the Driver Installation dialog box is displayed, , two drivers needs to be installed, as shown in Figure 2.5.

| | | Device Driver Installation Wizard |
|-------------------|-----------------------------|--|

| Issue V1.9.0 (2020-07-23) User Guide Copyright © Yuejiang Technology Co., Lt |
|--|
|--|

Step 5 Click Next to install the first driver, and then click INSTALL to install the second driver.

When the drivers are installed successfully, the **Completing the Device Driver Installation Wizard** dialog box is displayed. Click **Finish** ,as shown in Figure 2.6.

| Completing the Device Driver Installation Wizard |
|---|
| The drivers were successfully installed on this computer. |
| You can now connect your device to this computer, if your device came with instructions, please read them first. |
| |
| Driver Name Status |

Figure 2.6 The Completing the Device Driver Installation Wizard dialog box

Step 6 Click Next to continue to install the DobotStudio by following the prompts on the Setup – DobotStudio dialog box.

When the installation is complete, the **Completing the DobotStudio Setup Wizard** dialog box is displayed. Click Finish, as shown in Figure 2.7.

Step 7 Click Finish.

2.2.4 Verifying the Installation

```
Issue V1.9.0 (2020-07-23) User Guide Copyright © Yuejiang Technology Co., Ltd.
```

2.2.4.1 Verifying the DobotStudio

If the DobotStudio is launched and runs properly by double-clicking the desktop shortcut to this program, it means that it is installed successfully.

2.2.4.2 Verifying the Dobot Magician Driver

If an available COM port is displayed on the upper left corner of the DobotStudio page after the robotic arm is powered on, as shown in Figure 2.8, the Dobot Magician driver is installed successfully.

Figure 2.8 An available COM port is displayed

If no COM port is available, check whether the robotic arm driver is successfully installed by following the steps below.

- Step 1 Connect the Dobot Magician to your computer with the supplied USB cable.
- **Step 2** Press the power button to apply power.
- Step 3 Launch the Device Manager window to locate the Ports (COM & LPT) section. If the item Silicon Labs CP210x USB to UART Bridge (COM6) or USB-SERIAL CH340(COM3) is displayed, it means the Dobot Magician driver is installed successfully.

Figure 2.9 The V2 robotic arm driver in Device Manager window

Figure 2.10 The V1 robotic arm driver in Device Manager window

To reinstall the Dobot Magician driver after uninstalling it, install the driver corresponding to the Windows version in the directory *Installation Directory* DobotStudio attachment Drive Hardware V1.0.0. For example, install the 64-bit driver on a 64-bit Windows 10, as shown in Figure 2.11.

Figure 2.11 Install the 64-bit driver on a 64-bit Windows 10

• If the DobotStudio hardware version is 0.0.0, install the driver matching the Windows version in the directory:

Installation Directory|DobotStudio|attachment|Drive|HardwareV0.0.0.

Please connect the DobotStudio to the robotic arm and then click of to check the hardware version.

2.3 Powering On/Off the Dobot Magician

• **Power on:** align the Dobot Magician into its neutral position with its Forearm and Rear Arm constructing a 45-degree angle, and press down the power button in the base, as shown in Figure 2.12. Once the robotic arm is powered on, the LED indicator turns yellow, and all the stepper motors lock. And then wait about seven seconds, a short beep sound will be heard, and the LED indicator turns from yellow to green. Now the Dobot Magician is ready to use.

If the LED indicator is red after powering on the Dobot Magician, it means that the robotic arm reaches its limited position. To go back to the workspace, press and hold the

unlock button () on the Forearm to move the robotic arm to another desired position After releasing the button the LED indicator turns green.

Figure 2.12 The gesture of Dobot Magician before power-on

Power off: When the LED indicator is green, press down the power button to turn off the robotic arm. In this case, the Forearm moves slowly to the Rear Arm while the angle between them becomes small. Finally, the two arms reach a specific position.

During the shutdown process, watch your hand.

2.4 Getting Started

This topic describes how to use the Dobot Magician to complete the teaching & playback function by saving three points in the MOVJ mode, allowing you to get the basic knowledge of the usage of the robotic arm.

Prerequisites

- The DobotStudio has been installed. For details, see 2.2 Installing the DobotStudio.
- The Dobot Magician is powered on. For details, see 2.3 Powering On/Off the Dobot Magician.

Procedure

Step 1 Double-click the desktop shortcut to the DobotStudio.

The DobotStudio page with its beginner guide is displayed, as shown in Figure 2.13.

Figure 2.13 The DobotStudio page with a beginner guide

After reading the beginner guide of the DobotStudio, click \bowtie to close it.

Step 2 Click Connect on the DobotStudio page, as shown in Figure 2.14.The Question dialog box is displayed, as shown in Figure 2.15.

| - | СОМ6 | Magician | R |
|---------|------|----------|----------|
| Connect | Como | | <u> </u> |

Figure 2.14 Click Connect

Figure 2.15 The Question dialog box

Step 3 Click Link Now.

```
Issue V1.9.0 (2020-07-23)User GuideCopyright © Yuejiang Technology Co., Ltd.
```

Because this section is for quick access to the Dobot Magician only and no high accuracy is required.

When **Connect** changes to **Disconnect**, it means that the DobotStudio is connected to the Dobot Magician.

NOTE

To achieve a high accuracy of the robotic arm, click **Wait Link**.

Step 4 Use DobotStudio to accomplish a teaching & playback task.

- Image: Control

 Image: Cont
- 1. Click Teaching & Playback, as shown in Figure 2.16.

Figure 2.16 Click Teaching & Playback

After reading a beginner guide on the **Teaching & Playback** page, as shown in Figure 2.17, click \checkmark to close it.

Figure 2.17 Teaching & Playback page

Select PTP Point > MOVJ mode in the Save Point area, as shown in Figure 2.18.

Figure 2.18 Select MOVJ motion mode

3. Press and hold the unlock button on the Forearm to move the robotic arm to a position such as point A, and then release the button.

In this case, the DobotStudio will save the Cartesian coordinate of point A, as shown in Figure 2.19.

Figure 2.19 The Cartesian coordinate of point A

NOTE:

Apart from hand-guided teaching, you can accomplish a teaching task by jogging the Dobot Magician in the Cartesian or Joint coordinate system, as shown in Figure 2.20.

Figure 2.20 Jog the Dobot Magician in the Cartesian or Joint coordinate system

| Issue V1.9.0 (2020-07-23) | User Guide | Copyright © Yuejiang Technology Co., Ltd. |
|---------------------------|------------|---|
|---------------------------|------------|---|

4. Move the robotic arm to other two locations such as points B and C by referring to the method of creating point A above, as shown in Figure 2.21. The robotic arm will save the Cartesian coordinates corresponding to these two points.

3. Introduction

3.1 Overview

Dobot Magician is a multifunctional desktop robotic arm for practical training education, supporting teaching and playback, blockly graphic programming, script, etc. Installed with different end-effectors, Dobot Magician can realize interesting functions such as 3D printing, laser engraving, writing and drawing. It also supports secondary development by various extensible I/O interfaces, which really makes your creativity and imagination increase without any limitation.

3.2 Appearance and Constitute

Dobot Magician consists of Abase, Rear Arm, Forearm, and end-effector, etc. Figure 3.1 shows the appearance.

Figure 3.1 The appearance of Dobot Magician

3.3 Working Principle

This topic describes the workspace, principle, size and technical specifications of Dobot Magician.

3.3.1 Workspace

Figure 3.2 and Figure 3.3 shows the workspace.

Figure 3.2 Workspace of Dobot Magician (1)

Figure 3.3 Workspace of Dobot Magician (2)

Issue V1.9.0 (2020-07-23)

User Guide

3.3.2 Coordinate System

Dobot Magician has two types of coordinate system, the joint one and the Cartesian one, as shown in Figure 3.4 and Figure 3.5 respectively.

Figure 3.4 Joint coordinate system

Figure 3.5 Cartesian coordinate system

- Joint coordinate system: The coordinates are determined by the motion joints.
 - If the end-effector is not installed, Dobot Magician contains three joints: J1, J2, and J3, which are all the rotating joints. The positive direction of these joints is counterclockwise.
 - If the end-effector with servo is installed, such as suction cup kit, gripper kit, Dobot Magician contains four joints: J1, J2, J3 and J4, which are all the rotating joints. The positive direction of these joints is counter-clockwise.

Copyright © Yuejiang Technology Co., Ltd.

- Cartesian coordinate system: The coordinates are determined by the base.
 - The origin is the center of the three motors (Rear Arm, Forearm, base).
 - The direction of X-axis is perpendicular to the base forward.

```
Issue V1.9.0 (2020-07-23)
```

- The direction of Y-axis is perpendicular to the base leftward.
- The direction of Z-axis is vertical upward, which is based on the right hand rule.
- The R-axis is the attitude of the servo center relative to the origin of the robotic arm, of which the positive direction is counter-clockwise. The R-axis only exists once the end-effector with servo is installed.

3.3.3 Motion Function

The motion modes of Dobot Magician include Jogging, Point to Point (PTP), ARC.

3.3.3.1 Jogging Mode

Jogging mode is the mode jogging Dobot Magician along the Cartesian coordinate system or Joint coordinate system when teaching.

This topic describes jogging mode by the GUI operation of DobotStudio.

- Cartesian coordinate system mode
 - Click **X**+, **X** and Dobot Magician will move along X-axis in the negative or positive direction.
 - Click **Y**+, **Y** and Dobot Magician will move along Y-axis in the negative or positive direction.
 - Click **Z**+, **Z** and Dobot Magician will move along Z-axis in the negative or positive direction.
 - Click **R**+, **R** and Dobot Magician will rotate along R-axis in the positive or negative direction.

If the end-effector with servo is installed on the Dobot Magician, the R-axis will move together with Y-axis, to make sure that the terminal posture relative to the origin stays constant.

- Joint coordinate system mode
 - Click **J1**+, **J1** and control the base motor to rotate in the negative or positive direction.
 - Click **J2**+, **J2** and control the Rear Arm motor to rotate in the negative or positive direction.
 - Click **J3**+, **J3** and control the Forearm motor to rotate in the negative or positive direction.
 - Click J4+, J4- and control the servo to rotate in the negative or positive direction.

3.3.3.2 Point to Point (PTP)

PTP mode supports MOVJ, MOVL, and JUMP, which means point to point movement. The trajectory of playback depends on the motion mode.

| Issue V1.9.0 (2020-07-23) | User Guide | Copyright © Yuejiang Technology Co., Ltd. |
|---------------------------|------------|---|
| | 01 | |

• MOVJ: Joint movement. From point A to point B, each joint will run from initial angle to its target angle, regardless of the trajectory, as shown in Figure 3.6.

Figure 3.6 MOVL/MOVJ mode

- MOVL: Rectilinear movement. The joints will perform a straight line trajectory from point A to point B, as shown in Figure 3.6.
- JUMP: From point A to point B, the joints will move in MOVJ mode, of which the trajectory looks like a door, as shown in Figure 3.7.
 - 1. Move up the lifting Height in MOVJ mode.
 - 2. Move horizontally to a point that is above B by height.
 - 3. Move down to point B.

3.3.3.3 ARC

The trajectory of ARC mode is an arc, which is determined by three points (the current point, any point and the end point on the arc), as shown in Figure 3.8.

In ARC mode, it is necessary to confirm the three points with other motion modes, and the three points cannot be in a line.

```
Issue V1.9.0 (2020-07-23)
```

Figure 3.8 ARC mode

3.3.3.4 Application Scenarios

The application scenario depends on the trajectory in motion mode, as shown in Table 3.1.

| Motion mode | Application scenario |
|-------------|--|
| MOVL | If the trajectory of playback is required as a straight line, you can choose MOVL |
| MOVJ | If the trajectory of playback is not required but high speed is required, you can choose MOVJ |
| JUMP | If the movement of two points is required to lift upwards by amount of height, such as sucking up, grabbing, you can choose JUMP |
| ARC | If the trajectory of playback is required as an arc, such as dispensing, you can choose ARC |

Table 3.1 Application scenario

3.4 Technical Specifications

3.4.1 Technical Parameters

| Name | Dobot Magici | Dobot Magician | | |
|--------------------|-----------------------|----------------|--|--|
| Maximum payload | 500g | | | |
| Maximum reach | 320mm | | | |
| Motion range | Base | - 90 °~+90 ° | | |
| | Rear Arm | 0 °~85 ° | | |
| | Forearm | - 10 °~+90 ° | | |
| | End-effector rotation | - 90 °~+90 ° | | |

| Maximum speed (with 250g payload) | Rotational speed of Rear arm, Forearm and base | 320 %s |
|---|--|---------------|
| | Rotational speed of servo | 480 %s |
| Repeated positioning accuracy | 0.2mm | |
| Power supply | 100V-240V AC, 50/60Hz | |
| Power in | 12V/7A DC | |
| Communication | USB, WIFI, Bluetooth | |
| I/O | 20 extensible I | /O interfaces |
| Software | DobotStudio | |
| Working temperature | -10 °C~60 °C | |

3.4.2 Sizes

Figure 3.9 shows the size of Dobot Magician and Figure 3.10 shows the size of the end mounting hole.

Figure 3.9 Size of Dobot Magician

Figure 3.10 Size of end mounting hole

4. Interface Description

4.1 Interface Board

The interfaces of Dobot Magician are located on the back of the base and the Forearm respectively. Figure 4.1 shows the interfaces on the back of the base, and Table 4.1 lists the description.

Figure 4.1 Interfaces in the base

| No. | Description |
|-----|--|
| 1 | Reset key: Reset MCU program |
| | During resetting, the LED indicator on the base turns yellow. About 5 seconds later, if the LED indicator turns green, it indicates that the reset is successful |
| 2 | Functional key: |
| | Short press: Start running offline program |
| | • Long press for 2 seconds: Starting homing procedure |
| 3 | Communication interface/UART interface: Connect with Bluetooth, WIFI and |
| | so on |
| | The Dobot protocol is adopted. |
| 4 | USB interface: Connect with PC |
| 5 | Power interface: Connect with power adaptor |
| 6 | Peripheral interface: Connect with air pump, extruder, sensor and other |
| | peripheral equipment. For details about peripheral interfaces, please see Table |
| | 4.2 |

Table 4.2 lists the peripheral interface description.

Issue V1.9.0 (2020-07-23)

| Interface | Description |
|-----------|---|
| SW1 | Power interface of air pump; output 12V of controllable power |
| SW2 | Output 12V of controllable power |

4.2 LED Indicator

The LED indicator is located on the base, Table 4.4 lists the status description.

| n | |
|---|---|
| í | ۱ |

| Status | Description | |
|---------------|--|--|
| Green On | Dobot Magician works normally | |
| Yellow On | Dobot Magician is in the starting status | |
| Blue On | Dobot Magician is in the offline mode | |
| Blue Blinking | Dobot Magician is running homing procedure or auto levelling | |
| Red On | • Dobot Magician is at the limited position | |
| | • Alarm is not cleared | |
| | • Connection of 3D printing kit is abnormal | |

4.3 Multiplexed I/O Interface Description

The addresses of the I/O interfaces in Dobot Magician are unified. Most of I/O interfaces have multiple functions, to control the peripheral equipment.

4.3.1 Multiplexed Base I/O Interface Description

4.3.1.1 Multiplexed UART Interface Description

Figure 4.3 shows the UART interface on the base, Table 4.5 lists the multiplexed I/O description.

5. Operation

5.1 Introduction to the DobotStudio

5.1.1 Function Modules

You can use the DobotStudio to control the Dobot Magician to accomplish multiple functions such as **Teaching & Playback**, **Write & Draw**, **Blockly** graphic programming, and **Script** control, as shown in Figure 5.1. For details, see Table 5.1.

Figure 5.1 The function modules on the DobotStudio page

| Function Modules | Description |
|---------------------|---|
| Teaching & Playback | Teach the Dobot Magician how to move and then record the movement to make Dobot Magician accomplish the recorded movements |
| Write & Draw | Control the robotic arm to write, draw, or engrave an object using a laser |
| Blockly | Use Blockly to program the robotic arm in a graphic programming environment. It allows the users to drag and drop the blocks onto a workplace to generate execute code just as intuitive and easy as a block puzzle |
| Script | Control the robotic arm using the script commands |
| Leap Motion | Support hand motions as input to control the robotic arm via a Leap Motion controller |
| Mouse | Control the robotic arm using a mouse |
| LaserEngraving | Engrave a bitmap image on an object using a laser |
| 3DPrinter | Capable of 3D printing |
| Add More | Add more custom functions to manipulate the robotic arm. |

Table 5.1 The function modules on the DobotStudio page

| Issue V1.9.0 (2020-07-23) User Guide Copyright © Yuejiang Technology Co., Ltd. |
|--|
|--|

You can also set the Dobot Magician by clicking **Setting** on the DobotStudio page, for example, implement general settings, base calibration, manual levelling, and auto levelling, as shown in Figure 5.2. For details, see Table 5.2.

| General Setting | | | × |
|---|---|------------------------------------|--------|
| General Update Firmware Sensor and Base Base Calibration Manual Levelling Auto Levelling Initial Pos | Open Tutorial Device Name Use Linear Rail V2 Advanced I\O Function ? Lost Step Alarm | debot12 Alarm Threshold(*): 8 🗧 | • |
| Jog Playbeck Write Draw Lesp Motion Mouse LaverEngraving | Default | Αρρίγ ακ. | Cancel |

Figure 5.2 The General Setting page

| Table 5.2 | The General Setting page |
|-----------|--------------------------|
|-----------|--------------------------|

| Items | Description |
|------------------|--|
| General | Set tutorial open or close, show console when startup, device name, use Linear rail V2 |
| Firmware | Switch firmware |
| | For example, you can switch to the 3D printer firmware to implement 3D printing from the currently selected Dobot firmware |
| Sensor and Base | Set the Base Encoder and the angle sensors on the Forearm and Rear Arm |
| Base Calibration | Calibrate the base Encoder |
| Manual Levelling | Manually calibrate the angle sensors on the Forearm and Rear Arm |
| Auto Levelling | Automatically calibrate the angle sensors on the Forearm and Rear Arm. |
| Initial Pos | Set the initial pose of the robotic arm. |
| Jog | Set the jogging speed and acceleration in the Joint coordinate system and Cartesian coordinate system |
| Playback | Set the joint parameters, coordinate parameters, Jump parameters, handhold teaching and LostStepParam. |
| Write Draw | Set the Write & Draw function, such as speed, Junction velocity, linear acceleration, acceleration, pen up offset and pen down position. |

Issue V1.9.0 (2020-07-23)

| Items | Description |
|----------------|--|
| Leap Motion | Set the parameters such as speed, scale, and performance for hand gesture control. |
| Mouse | Set the parameters such as speed, scale, and performance for mouse control. |
| LaserEngraving | Set the parameters such as junction velocity, linear acceleration, acceleration, pen down position, and DPI for laser engraving. |

5.1.2 Common Areas of DobotStudio Page

The DobotStudio offers the following common areas shared by all the function modules to control the robotic arm.

• You can select the liner rail or an end-effector on the DobotStudio page, as shown in Figure 5.3.

Figure 5.3 The linear rail and end-effector drop-down list

| Items | Description |
|--------------------------------|--|
| Linear rail | When the robotic arm is connected to a linear rail, click this item to enable the rail |
| End-effector drop-down list | When the end-effector is a suction cup kit, gripper kit, laser kit or writing and drawing kit, select the corresponding kit in this list |

| | Table 5.3 | The linear rail and end-effector drop-down list |
|--|-----------|---|
|--|-----------|---|

• You can also perform other operations on the DobotStudio page such as Setting, Home, Emergency Stop, and viewing the versions, as shown in Figure 5.4.

Figure 5.4 Setting, Home, Emergency Stop, and viewing the versions

| Items | Description |
|----------------|---|
| Setting | Set the robotic arm such as firmware upgrade, sensor and base setup. For details, please refer to Table 5.2 |
| Home | Set the Dobot Magician back to its home position to get a correct reference position When the Dobot Magician is moving, if its movement is hindered by an obstacle or the stepper motors lost steps, perform the homing operation |
| Emergency Stop | Stop the robotic arm if an emergency occurs |
| | |

Table 5.4 Setting, Home, Emergency Stop, and viewing the versions

| Items | Description |
|-------|--|
| 0 | View the version information such as DobotStudio version, firmware version, and hardware version |
| ZS | Switch system language |

With the **Operation Panel** on the **DobotStudio** page, you can teach the robotic arm to perform a specific task such as jogging the robotic arm in the Cartesian or joint coordinate system, or controlling a gripper, suction cup, or laser, as shown in Figure 5.5. For details, please refer to Table 5.5.

Figure 5.5 Setting the Operation Panel

Table 5.5 Setting the Operation Panel

| Items | Description |
|--------------------|---|
| Coordinate jogging | Jog the Dobot Magician by clicking X (X+/-), Y (Y+/-), Z (Z+/-), or R (R+/-) in the Cartesian coordinate system |
| Joint jogging | Jog the Dobot Magician by clicking J1+/-, J2+/-, J3+/-, or J4+/- in the Joint coordinate system |

| Items | Description |
|------------------------|---|
| Linear control | When the linear rail is enabled (see Table 5.3), click L+/- to move the robotic arm along the rail. Value range: 0 mm - 1000 mm |
| Gripper control | When the end-effector is chosen as a Gripper , you can set the gripper to open, close, or disable in the Gripper drop-down box |
| Suction cup control | When the end-effector is chosen as a Suction Cup , select SuctionCup to power on the air pump. If unselected, the air pump is powered off |
| Laser control | When the end-effector is chosen as a Laser , select Laser to turn on the laser. If unselected, the laser is turned off |
| Jogging speed control | Set the jogging speed percentage Default value: 50% Value range: 1% - 100% |

5.2 Performing Teaching & Playback Tasks

This topic introduces how to perform a teaching & playback task to suck or grab a small cube. Because a suction cup kit or a gripper kit is required, we will explain them first.

5.2.1 Installing a Suction Cup Kit

A suction cup kit is the default end-effector shipped with the Dobot Magician. When using the suction cup kit, an air pump is necessary, as shown in Figure 5.6.

Figure 5.6 A suction cup kit

Procedure

Please install a suction cup kit based on Figure 5.7.

Figure 5.7 Connect the air pump to the Dobot Magician

5.2.2 Installing a Gripper Kit

An air pump should be used with the gripper kit, as shown in Figure 5.8, to open or close the gripper.

Figure 5.8 A gripper kit

Procedure

Step 1 Dismantle the suction cup by unfastening its terminal strand with a 1.5mm hexagon wrench, as shown in Figure 5.9.

Figure 5.9 Dismantle the suction cup

Step 2 Install a gripper kit to the servo with a 2.5mm hexagon wrench, as shown in Figure 5.10.

Figure 5.10 Install a gripper kit

Step 3 Connect the gripper kit and an air pump to the Dobot Magician in the same way as the suction cup kit is installed. For details, see 5.2.1 Installing a Suction Cup Kit. Figure 5.11 shows the effect of the gripper kit installation.

Figure 5.11 The effect of the gripper kit installation

5.2.3 Teaching & Playback Page

The **Teaching & Playback** page is shown in Figure 5.12. To access it, select **Connect** > **Teaching & Playback** on the **DobotStudio** page.

Figure 5.12 The Teaching & Playback page

• In both **Easy** and **Pro** modes, you can switch between **Easy** and **Pro** modes, set loop, speed percentage, and acceleration percentage, as shown in Figure 5.13.

Figure 5.13 Set Easy/Pro, Loop, Speed and Acceleration (Acc)

| Items | Description |
|-----------------------|---|
| Easy/Pro | Click this slider to switch between Easy and Pro modes. The default is the Easy mode Apart from all the functions in the Easy mode, the Pro mode offers multiple features such as the offline mode and multiplexed I/O interface |
| Loop | Set the loop that the robotic arm plays back the recorded steps Default value: 1 Value range: 1 - 999999 |
| Speed | Set the speed ratio when doing playback Default value: 50% Value range: 0% - 100% |
| acceleration (Acc) | Set the acceleration ratio when doing playback Default value: 50% Value range: 0 - 100% |
| Exit | Exit the current Teaching & Playback page to return to the DobotStudio page |

• In both **Easy** and **Pro** modes, you can save points, set the motion mode and the pause time for a save point, as shown in Figure 5.14.

Figure 5.14 Set the save points, motion modes and pause time

| Items | Description |
|-------------|---|
| +Point | Click to create a new save point in the Save points list |
| Motion mode | Choose a PTP (point to point) Point mode or ARC Point mode. In the PTP Point mode, you can select MOVJ, MOVL, or JUMP mode while the ARC Point mode requires a second point cirPoint and a finish point toPoint as well as the start point set via the PTP Point mode |
| Pause time | Set the pause time for a save point |

Table 5.7 Set the save points, motion modes, and pause timess

• In both Easy and Pro modes, you can edit a highlighted save point such as copy, paste, cut,

| Issue V1.9.0 (2020-07-23) | User Guide | Copyright © Yuejiang Technology Co., Ltd. |
|---------------------------|------------|---|
| | 20 | |

switch between motion modes, modify name and coordinates, as shown in Figure 5.15.

Figure 5.15 The Save points list

| Table 5.8 | The Save | points list |
|-----------|----------|-------------|
| 10010 0.0 | | pointo not |

| Items | Description |
|--------------------------------|---|
| A right-click mouse operation | In the right-click popup menu you can edit a highlighted save point such as copy, paste, cut, insert, and delete, as shown in Figure 5.15 |
| A double-click mouse operation | Double-clicking a cell to modify its value |

• **Pro** mode: To enter the **Pro** mode from the current **Easy** mode, click the **Easy/Pro** slider, as shown in Figure 5.16. Apart from all the functions in the default **Easy** mode, the **Pro** mode allows the robotic arm to run a save point each time, detect lost-steps, work in offline mode, and perform the multiplexed I/O interface. For details, see Table 5.9.

Figure 5.16 The Pro mode of the Teaching & Playback function

| No. | Description |
|-----|--|
| 1 | StepRun: run a save point each time in the Save points list. Before clicking StepRun , please select a saved point. |
| 2 | Download: download the Save points list to the Dobot Magician for working in offline mode. For details, see <i>5.3 Working in Offline Mode</i> |
| | Check Lost Step: the Dobot Magician detects if lost-steps occur in its movements. The default threshold is 5 degrees. It should be at least 0.5 degrees. You can set the threshold by selecting Setting > Playback > LostStepParam . |
| 3 | If Check Lost Step is selected, the robotic arm detects if the stepper motors lose steps when moving. If unselected, no detection is performed |
| | If the Dobot Magician detects lost-steps, it stops working, and its LED indicator turns red. In this case, click Home to get a correct reference position |
| 4 | Multiplexed I/O interface: control the Dobot Magician via the I/O interfaces such as turning on or off the air pump |

Table 5.9 The Pro mode of the Teaching & Playback function

5.2.4 ARC Motion Mode

Application Scenarios

The **ARC** motion mode requires three points in an arc to complete the arc movement process. In the **ARC** motion mode, only the second point and end point are saved while the start point is determined by the other modes.

Prerequisites

The Dobot Magician has been powered on and connected to your computer.

Procedure

Note the following rules when saving points to prevent the robotic arm from working outside its normal workspace.

- Any two points cannot coincide.
- The three points cannot be in the same straight line.
- The arc trajectory cannot exceed the Dobot Magician's normal workspace.

For example the points A, B, and C are on the arc. Point A is the start point; Point B is the second point; Point C is the end point, as shown in Figure 5.17.

Figure 5.17 The arc trajectory

Step 1 Click Teaching & Playback.

The Teaching & Playback page is displayed.

- **Step 2** Save the start point A.
 - 1. Select **MOVJ** motion mode in the Save Point area.
 - 2. Set the jogging speed percentage to **50** on the **Operation Panel**.
 - 3. Jog the Dobot Magician in the Cartesian or Joint coordinate system to move the robotic arm to a location called position A.
 - 4. Click +**Point** to save the coordinate corresponding to the position A, as shown in Figure 5.18.

Figure 5.18 Save the start position A

Step 3 Save the second point B and the end point C.

- 1. Select **cirPoint** to save the second point in the Save Point area.
- 2. Jogging the Dobot Magician in the Cartesian or Joint coordinate system to move the robotic arm to the second position B as required.
- 3. Click +**Point** to save the coordinate corresponding to the position B. In this case, the DobotStudio automatically changes the motion mode to **toPoint** to get ready to save the end position.

- 4. Jogging the Dobot Magician in the Cartesian or Joint coordinate system to move the robotic arm to the end position C as needed.
- 5. Click +**Point** to save the coordinates corresponding to the positions B and C, as shown in Figure 5.19.

Figure 5.19 Save the second position B and the end position C

- **Step 3** Set the percentage of both speed and acceleration for playback, for example 50.
- Step 4 Set Loop to 2.
- **Step 5** Click **Start**. The Dobot Magicin perfrom the sequence of ARC trajectory as taught from its memory system, moving from positions A to C.

5.2.5 Teaching & Playback Example

Application Scenarios

You can use Teaching & Playback function module to manipulate the Dobot Magician to accomplish different tasks such as transportation or intelligent sort. This topic introduces how to move small cubes from position A to B in the **JUMP** motion mode.

Prerequisites

- The Dobot Magician has been powered on and connected to your computer.
- A suction cup kit has been installed. For details, see 5.2.1 Installing a Suction Cup Kit.

Procedure

Step 1 Choose **SuctionCup** as the end-effector on the **DobotStudio** page, as shown in Figure 5.20.

Figure 5.20 Choose SuctionCup as the end-effector

Step 2 Click Teaching & Playback.

The **Teaching & Playback** page is displayed.

Issue V1.9.0 (2020-07-23)User GuideCopyright © Yuejiang Technology Co., Ltd.

NOTE

After reading the beginner guide of the DobotStudio, click it.

Step 3 Save the start point A.

- 1. Put a small cube on the work surface near the suction cup kit.
- 2. Select the MOVJ motion mode in the Save Point area.
- 3. Set the jogging speed percentage to 50 on the Operation Panel.

NOTE

To change the jogging speed, select **Setting** > **Jog** to set the speed and acceleration of the joints, linear rail, or the Cartesian coordinate system, as shown in Figure 5.21.

| 🤨 Jog Setting | | | | * |
|------------------|--------------------------------------|----------------|----|--------|
| General | Joint Coordinate | 15.00 | | |
| Update | joint1Acceleration | 50.00 | | |
| Firmware | point2Velocity | 15.00 | | • |
| Welle | joint2Acceleration joint3Velocity | 50.00 15.00 | | 2 |
| Sensor and Base | joint3Acceleration | 50.00 | | 1 |
| Base Calibration | joint4Velocity joint4Acceleration | 30.00 | | : |
| Manual Levelling | IVelocity | 30.00 | | ÷ |
| Auto Levelling | Acceleration | 50.00 | | 1 |
| Initial Pos | | | | |
| jag | | | | |
| Playback | | | | |
| Write Drew | | | | |
| Leap Motion | | | | |
| Mouse | | | | |
| LaserEngraving | Default: | Apply | Ok | Cancel |

Figure 5.21 Adjust the jogging speed

Regarding the jogging speed and acceleration in the Joint coordinate system and Cartesian coordinate system, we recommend that it should be less than 500mm/s if loaded and that less than 800mm/s if not loaded.

4. Jog the Dobot Magician in the Cartesian or Joint coordinate system to move the suction cup close enough to the small cube for picking-up. For example, the

suction cup reaches this location called position A.

- 5. Select **SuctionCup** on the **Operation Panel** to turn on the air pump to pick up the small cube.
- 6. Set the **PauseTime** to **1** second in the Save Point area.
- 7. Click +**Point** to save the coordinate corresponding to the position A, as shown in Figure 5.22.

Figure 5.22 Save the start position A

Step 4 Save the end point B.

1. Select the **JUMP** motion mode in the Save Point area.

To change the jogging speed percentage, drag the speed slider.

2. Set the lifting height (**JumpHeight**) and the maximum lifting height (**Z Limit**) by selecting **Setting** > **Playback** > **JumpParam**, as shown in Figure 5.23.

Figure 5.23 Jump parameters

- 3. Jogging the Dobot Magician in the Cartesian or Joint coordinate system to move the small cube to the end position B as required.
- 4. Unselect **SucktionCup** to turn off the air pump to release the small cube.
- 5. Click +**Point** to save the coordinate corresponding to the position B, as shown in Figure 5.24.

Joint coordinate system, as shown in Figure 5.25. For details, see Table 5.10.

Figure 5.25 Set the speed and acceleration of the playback

| Items | Description |
|----------------------|---|
| JointParam | Set the speed and acceleration of the joints |
| CoordinateParam | Set the speed and acceleration in the Cartesian coordinate system |
| JumpParam | Set the Jump height and Z limit, which are required in the JUMP motion mode |
| Handhold Teaching | Enable or disable the handhold teaching. Automatically save a point when releasing the unlock button or pressing this button |
| LostStepParam | Set the lost-step checking threshold |

Table 5.10 Set the Playback

We recommend that the motion range of Joint 1 should be 60° to -90° , the motion range of Joint 2 should be 0° to 85° , the motion range of Joint 3 is -5° to 85° , and the motion range of Joint 4 is -90° to 90° .

Step 6 Set Loop to 2.

Step 7Place the small object back to the position A, and click Start. The Dobot Magician
performs the sequence of JUMP trajectory as taught from its memory system, movingIssue V1.9.0 (2020-07-23)User GuideCopyright © Yuejiang Technology Co., Ltd.

the small cube from positions A to B.

5.3 Working in Offline Mode

Offline mode allows the Dobot Magician to perform the points in the Save points list previously downloaded from the DobotStudio without keeping the USB connection established.

Prerequisites

- The Dobot Magician has been powered on.
- The Dobot Magician has been connected to the DobotStudio.
- The points have been saved.

Procedure

- Step 1 Click the Easy/Pro slider to enter the Pro mode on the Teaching & Playback page.
- Step 2 Click Download.

The **Question** dialog box is displayed, asking if you want the Dobot Magician to automatically to go back to its homing point before performing the save points in the offline mode, as shown in Figure 5.26.

Figure 5.26 Click Download

Step 3 Click OK to download the Save points list.

When the process bar at the bottom of the **DobotStudio** page shows 100% and then disappears, it means that the download is complete.

- **Step 4** Disconnect the DobotStudio from the Dobot Magician or the USB cable between the robotic arm and your computer.
- **Step 5** Short press the **Key** button once on the base's rear panel.
- **Step 6** The Dobot Magician returns to its homing point and performs the downloaded save points. To stop the robotic arm's movement, short press the Key button once.

• Before using offline mode, Dobot Magician needs to be reset by clicking Home to make Dobot Magician more accurate. For the details please refer to Appendix A Dobot Magician Homing Operation

Copyright © Yuejiang Technology Co., Ltd.

```
Issue V1.9.0 (2020-07-23)
```

• If press down **Key** button for long time, Dobot Magician will execute homing operation directly.

Figure 5.27 Base panel

5.4 Writing and Drawing

Figure 5.28 shows the process of writing and drawing.

Figure 5.28 The process of writing and draw

5.4.1 Installing a Writing and drawing kit

A writing and drawing kit consists of a pen and a pen holder. For detailed steps, see below.

- **Step 1** Install a pen in the pen holder.
- **Step 2** Fasten the writing and drawing kit to the Dobot Magician's end with clamp fixing screw, as shown in Figure 5.29.

Issue V1.9.0 (2020-07-23)

User Guide Copyright © Yuejiang Technology Co., Ltd.

Figure 5.29 Install a writing and drawing kit

To change to a new pen, unfasten the four M3*5 set screws in the pen holder with a 1.5mm hexagon wrench, as shown in Figure 5.30.

Figure 5.30 Change to a new pen

Step 3 Position a sheet of paper on the work surface within the workspace of the Dobot Magician.

5.4.2 Connecting the DobotStudio

Step 1 Launch the DobotStudio, and select the COM port, and then click Connect.

If the current firmware of the Dobot Magician is the 3D Printing firmware instead of the Dobot firmware, the **Select tool** dialog box is displayed, asking if you want to switch to the Dobot firmware. In this case, perform the following steps to switch to this firmware.

1. Select **DobotStudio** to upgrade the Dobot firmware, as shown in Figure 5.31.

| Issue V1.9.0 (2020-07-23) User Guide Copyright © Yuejiang Technology Co., Ltd |
|---|
|---|

The dialog box is displayed.

Figure 5.31 Select the DobotStudio to upgrade the Dobot firmware

2. Click **OK**, as shown in Figure 5.32.

The Dobot firmware upgrade window is displayed.

Figure 5.32 Confirm the firmware upgrade

3. Click **Confirm** to upgrade the Dobot firmware, as shown in Figure 5.33. When the upgrade process bar shows 100%, and a short beep sound is heard, it means that the firmware is upgraded successfully, as shown in Figure 5.34. In this case, the LED indicator turns from red to green. Then click **Quit** to exit.

Figure 5.33 Click Confirm

Figure 5.34 The firmware upgrade is successful

During the firmware upgrade, do not stop it. Otherwise, errors occur.

- Step 2 Click Connect on the DobotStudio page to connect the DobotStudio to the Dobot Magician.
- Image: substrate of the second se
- Step 3 Click Write & Draw, as shown in Figure 5.35.

Figure 5.35 Click Write & Draw

5.4.3 Importing Image Files and Setting Writing Parameters

When performing a write & draw task, a built-in or custom image file is required. Only a PLT or SVG image can be used. The built-in file is located in the directory *Installation Directory* **\DobotStudio\config\prefab\system\source**.

Prerequisites

A PLT or SVG image file has been created.

Procedure

Step 1 Click Write & Draw on the DobotStudio page, as shown in Figure 5.37.

Figure 5.37 Click Write & Draw

Step 2 Import an image file using one of the following methods.

The imported image should be placed within the annular area on the **Write & Draw** page, as shown in Figure 5.38. If not, the robotic arm reaches its limited position and cannot draw or write. In this case, the image is highlighted with a red border, as shown in Figure

5.39.

Figure 5.38 The PLT or SVG image is located within the annular area

Figure 5.39 The PLT or SVG image is located outside the annular area

Click Open on the Write & Draw page to import a built-in PLT or SVG image file from the DobotStudio installation directory
 InstallatonDirectory\DobotStudio\config\prefab\system\source, as shown in Figure 5.40. You can also import your custom PLT or SVG image file.

Figure 5.40 Open a PLT or SVG system image file

• Click a shape in the **Input Shapes** area, as shown in Figure 5.41.

Figure 5.41 Insert a system image file

• Click **Input Texts** on the **Write & Draw** page to input texts, and set its style, and then click **OK** to display the text on the annular area, as shown in Figure 5.42.

Figure 5.42 Input text

Click Open to import an image file such as BMP, JEPG, or PNG to convert this image to
its corresponding SVG file that the DobotStudio supports. Once this image is imported, the
SVG Converter dialog box is displayed, as shown in Figure 5.43. In this dialog box, drag
the slider to set the black and white threshold, and click Convert Bitmap To SVG to
perform the conversion, and then click Plot to Main Scene to display the converted SVG
file on the annular area of the Write & Draw page.

Figure 5.43 Convert an image to SVG

MNOTICE

After image is converted to SVG, if there are single colors and fewer lines in image, you need to adjust threshold, otherwise picture can't be uploaded to DobotStudio.

Figure 5.44 Error tip

Step 3 Set the writing parameters.

Click Setting > Write & Draw to set the Dobot Magician's Velocity (mm/s), junction velocity (JunctionVel: mm/s), PlanAcc (mm/s²), acceleration (Acc: mm/s^2), PenUpOffset (mm), PenDown (mm), as shown in Figure 5.45.

NOTE

We recommend to set the Velocity in the range of 0mm/s to 500mm/s and to adjust the acceleration between 0mm/s² and 500mm/s².

| General | Velocity | 100,0000 | |
|-------------------|-------------|----------|---|
| Update | JunctionVel | 100.0000 | Ĩ |
| Firmware | PlanAcc | 100.0000 | R |

Figure 5.45 Setting the parameters of the Write & Draw function

5.4.4 Adjust the Position of the Pen Nib

Issue V1.9.0 (2020-07-23) User Guide Copyright © Yuejiang Technology Co., Ltd.

Procedure

Step 1 Raise and lower the position of the pen nib.

Press and hold the unlock button on the Forearm to move the Dobot Magician to raise and lower the pen nib until it slightly squeezes the paper. You can also jog

the robotic arm in the Cartesian or Joint coordinate system to slowly pull the Z axis down to a suitable vertical position for writing, as shown in Figure 5.46.

Figure 5.46 Adjust the position of the pen nib

NOTE

The point marked by a red box, as shown in Figure 5.47, corresponds to the position of the writing and drawing kit of the Dobot Magician. This point changes its position only within the annular area when the robotic arm moves.

Figure 5.47 The point corresponding to the laser kit of the robotic arm

Step 2 Click AutoZ on the Write & Draw page to obtain and save the current value of the Z axis.

Issue V1.9.0 (2020-07-23)User GuideCopyright © Yuejiang Technology Co., Ltd.

Once this step is complete, the next time you start to write, directly import a PLT or SVG image file without adjusting the position of the pen nib, and click **SyncPos**, and then click **Start** to start writing on the paper, as shown in Figure 5.48.

Figure 5.48 Lock the height of writing

The value of the Z axis is the **PenDown** parameter. This parameter can be set by selecting **Setting** > **Write Draw** > **PenDown** on the **Write & Draw** page, as shown in Figure 5.49. If the effect of writing is not satisfactory, slightly raise and lower the height of the writing and drawing kit or directly change the value of **PenDown**.

Figure 5.49 The PenDown parameter

Step 3 Click SyncPos.

The Dobot Magician automatically moves above the position (**PenDown**) of the start point of the text.

Step 4 Click Start to start writing on the paper.

When writing, click **Pause** to pause the writing and **Stop** to halt the writing.

5.5 Performing Laser Engraving Tasks

Figure 5.50 shows the process of laser engraving.

Figure 5.50 The process of laser engraving

The LaserEngraving is different is from the grayscale engraving. The former uses the same firmware and DobotStudio function module as those of the **Write & Draw** function, and it can only engrave a vector graphics by drawing lines while the latter can engrave a grayscale image. For more information about the grayscale engraving, see 5.6 *Engraving a Grayscale Image*.

5.5.1 Installing a Laser Kit

Procedure

A laser kit includes a laser. For detailed steps, see below.

Step 1 Fasten the laser kit to the Dobot Magician's end with clamp fixing screw, as shown in Figure 5.51.

```
Issue V1.9.0 (2020-07-23)User GuideCopyright © Yuejiang Technology Co., Ltd.
```

Figure 5.51 Fasten the laser with clamp fixing screw

Step 2 Connect the laser's power cable to the SW4 connector on the Forearm and the TTL control cable to the GP5 connector.

5.5.2 Connecting the DobotStudio

Step 1 Launch the DobotStudio, and select the COM port, and then click **Connect**.

If the current firmware of the Dobot Magician is the 3D Printing firmware instead of the Dobot firmware, the **Select tool** dialog box is displayed, asking if you want to switch to the Dobot firmware. In this case, perform the following steps to switch to this firmware.

 Select **DobotStudio** to upgrade the Dobot firmware, as shown in Figure 5.52. The **Question** dialog box is displayed.

2. Click **OK**, as shown in Figure 5.53.

| Issue V1.9.0 (2020-07-23) | User Guide | Copyright © Yuejiang Technology Co., Ltd. |
|---------------------------|------------|---|
| | (1 | |

The Dobot firmware upgrade window is displayed.

Figure 5.53 Confirm the firmware upgrade

3. Click **Confirm** to upgrade the Dobot firmware, as shown in Figure 5.54. When the upgrade process bar shows 100% and a short beep sound is heard, it means that the firmware is upgraded successfully, as shown in Figure 5.55. In this case, the LED indicator turns from red to green. Then click **Complete** to exit.

Figure 5.54 Click Confirm

Figure 5.55 The firmware upgrade is successful

During the firmware upgrade, do not stop it. Otherwise, errors occur.

- Step 2 Click Connect on the DobotStudio page to connect the DobotStudio to the Dobot Magician.
- Step 3 Click Write & Draw module function, as shown in Figure 5.56.

Figure 5.56 Click Write & Draw

```
Issue V1.9.0 (2020-07-23) User Guide Copyright © Yuejiang Technology Co., Ltd.
```

Step 4 Choose Laser as the end-effector, as shown in Figure 5.57.

Figure 5.57 Choose Laser as the end-effector

5.5.3 Importing Image Files and Setting Engraving Parameters

When performing a laser-engraving task, a built-in or a custom image file is required. Only a PLT or SVG image can be used. The built-in image file is located in the directory:

Installation Directory\DobotStudio\config\prefab\system\source.

Prerequisites

A PLT or SVG image file has been created.

Procedure

Step 1 Click Write & Draw on the DobotStudio page, as shown in Figure 5.58.

Figure 5.58 Click Write & Draw

Step 2 Import an image file using one of the following methods.

```
Issue V1.9.0 (2020-07-23) User Guide Copyright © Yuejiang Technology Co., Ltd.
```

The imported image should be placed within the annular area on the **Write & Draw** page, as shown in Figure 5.59. If not, the robotic arm reaches its limited position and thus cannot engrave on an object. In this case, the image is highlighted with a red border, as shown in Figure 5.60.

Figure 5.59 The PLT or SVG image is located within the annular area

Figure 5.60 The PLT or SVG image is located outside the annular area

• Click **Open** on the **Write & Draw** page to import a built-in PLT or SVG image file from the DobotStudio installation directory

*InstallatonDirectory***DobotStudio****config****prefab****system****source**, as shown in Figure 5.61. You can also import your custom PLT or SVG image file.

Figure 5.65 Setting the parameters of the Write & Draw function

5.5.4 Adjust the Laser Focus and Start to Grave

Procedure

Step 1 Choose Laser as the end-effector on the Write & Draw page, as shown in Figure 5.66.

Figure 5.66 Choose Laser as the end-effector

Step 2 Click to display the **Operation Panel**, and then select **Laser** to turn on the laser, as shown in Figure 5.67. In this case, the laser gives out a laser beam.

Figure 5.67 Turn on the laser

| Issue V1.9.0 (2020-07-23) | User Guide | Copyright [©] Yuejiang Technology Co., Ltd. |
|---------------------------|------------|--|
| | 68 | |

⚠ Danger

- When using a laser, wear lasing protective eyeglass.
- Never aim the laser at a person's eye and clothes or stare at the laser from within the beam.
- In the central laser focus, a high temperature heat is created and can burn materials such as papers and wooden boards.
- Never aim the laser at a person and their clothes.
- Do not allow the children to play with the Dobot Magician. Monitor the robotic arm while it is running and power off it once the movement is complete.
- Step 3 Press and hold the unlock button on the Forearm to move the robotic arm to raise and lower the height of the laser kit until the laser is the brightest with a smallest possible spot size. When the laser power level is high enough, the laser beam can burn and cut the paper. After getting a pretty good focus, unselect Laser on the Operation Panel page to turn off the laser, as shown in Figure 5.68.

Figure 5.68 Unselect the Lasers

• If you cannot set the laser to be at its minimum focus, it's probably because the focal length is long. To shorten the focal length, slightly turn the sliver lens screw (as shown in Figure 5.69) on the bottom of the laser kit.

Figure 5.69 Adjust the laser focus

• The point marked by a red box, as shown in Figure 5.70, corresponds to the position of the end-effector of the Dobot Magician. This point changes its position only within the annular area when the robotic arm moves.

Figure 5.70 The point corresponding to the end-effector of the robotic arm

Step 4 Click **AutoZ** on the **Write & Draw** page to obtain and save the current value of Z axis.

Once this step is complete, the next time you start to engrave, directly import a PLT or SVG image file without adjusting the position of the laser kit, and click **SyncPos**, and then click **Start** to start engraving on the paper, as shown in Figure 5.71.

Figure 5.71 Lock the height of engraving

The value of the Z axis is the **PenDown** parameter. This parameter can be set by selecting **Setting** > **Write Draw** > **PenDown** on the **Write & Draw** page, as shown in Figure 5.72. If the effect of engraving is not satisfactory, slightly raise and lower the height of the laser kit or directly change the value of **PenDown**.

| Draw Setting | | | |
|------------------|-------------|----------|--------|
| General | Velocity | 100.0000 | B |
| Update | JunctionVel | 100.0000 | |

Figure 5.74 The process of engraving a grayscale image

5.6.1 Installing a Grayscale-engraving Kit

Both grayscale-engraving and laser-engraving use the laser kit as the end-effector. For the installation method, see 5.5.1 Installing a Laser Kit.

5.6.2 Connecting the DobotStudio

Step 1 Launch the DobotStudio, and select the COM port, and then click Connect.

If the current firmware of the Dobot Magician is the 3D Printing firmware instead of the Dobot firmware, the **Select tool** dialog box is displayed, asking if you want to switch to the Dobot firmware. In this case, perform the following steps to switch to this firmware.

1. Select **DobotStudio** to upgrade the Dobot firmware, as shown in Figure 5.75. The **Question** dialog box is displayed.

2. Click **OK**, as shown in Figure 5.76.

The Dobot firmware upgrade window is displayed.

Figure 5.76 Confirm the firmware upgrade

3. Click **Confirm** to upgrade the Dobot firmware, as shown in Figure 5.77. When the upgrade process bar shows 100%, and a short beep sound is heard, it means that the firmware is upgraded successfully, as shown in Figure 5.78. In this case, the LED indicator turns from red to green. Then click **Complete** to exit.

Figure 5.77 Click Confirm

Issue V1.9.0 (2020-07-23) User Guide Copyright © Yuejiang Technology Co., Ltd.

Figure 5.78 The firmware upgrade is successful

During the firmware upgrade, do not stop it. Otherwise, errors occur.

Step 2 Click LaserEngraving, as shown in Figure 5.79.

Figure 5.79 Click LaserEngraving

5.6.3 Importing Image Files and Setting Engraving Parameters

Prerequisites

An image file has been created. You can also import system image, the importing path is *Installation Directory*\DobotStudio\attachment\grbrMode\source.

| Issue V1.9.0 (2020-07-23) | User Guide | Copyright © Yuejiang Technology Co., Ltd. |
|---------------------------|------------|---|
| | | |

Procedure

The imported image should be placed within the annular area on the **LaserEngraving** page, as shown in Figure 5.80. If not, the robotic arm reaches its limited position and thus cannot engrave on an object. In this case, the image is highlighted with a red border, as shown in Figure 5.81.

Figure 5.80 The image file is located within the annular area

```
Issue V1.9.0 (2020-07-23)User GuideCopyright © Yuejiang Technology Co., Ltd.
```

Step 1 Choose Laser as the end-effector on the LaserEngraving page, as shown in Figure 5.82.

Figure 5.82 Choose Laser as the end-effector

Step 2 Click Open to import an image file such as BMP, JPEG, or PNG, as shown in Figure 5.83.

Figure 5.83 Import an image file

Step 3 Set the Grayscale range, Laser power range, and Border, as shown in Figure 5.84. For details, see Table 5.11.

| | | | | LaserEngrowing | í. | | |
|------|-------|-------|---------|-------------------|----|-----|----------------|
| | | 100 | 6 | Grayscolo renge | 20 | 010 | Border William |
| Open | Stern | A.tož | Synchia | Laber power targe | 10 | -10 | Backet and |

| Items | Description |
|-------------------|---------------------------|
| Grayscale range | Set the grayscale range |
| | Range: 0 - 255 |
| | Default value: 20 - 240 |
| Laser power range | Set the laser power range |
| | Range: 2 - 100 |
| | Default value: 20 - 90 |
| Border | Set the border width. |
| | Unit: pixel |
| | Range: 0 - 50 |
| | Default value: 4 |

Table 5.11Laser engraving parameters

Step 4 Set the laser-engraving parameters.

- 1. Click **Setting** on the **LaserEngraving** page.
- 2. Set the **JunctionVel** (junction velocity), **PlanAcc** (linear acceleration), and Acc (acceleration), for example, set all to 5, as shown in Figure 5.85.

| Lower Solling . | | | |
|-------------------------------------|----------------|----------|--------|
| General | JunctionWel | 5.0000 | |
| Update | PlanAcc | 5.0000 | 0 |
| Firmware | Ace | 5.0000 | 2 |
| | PenDown DPI | 10.0000 | |
| Sensor and Base Base Calibration | | 101000 | |
| Vanual Levelling | | | |
| Auto Levelling | | | |
| Initial Pos | | | |
| | | | |
| Playtonck | | | |
| Write Draw | | | |
| Leap Motion | | | |
| Mouse | | | |
| LaserEngraving | Default | Apply Ok | Cancel |

5.6.4 Adjust the Laser Focus and Start to Engrave

Step 1 Click to display the **Operation Panel**, and then select **Laser** to turn on the laser, as shown in Figure 5.86. In this case, the laser gives out a laser beam.

- When using a laser, wear lasing protective eyeglass.
- Never aim the laser at a person's eye and clothes or stare at the laser from within the beam.
- In the central laser focus, a high-temperature heat is created and can burn materials such as papers and wooden boards.
- Never aim the laser at a person and their clothes.
- Do not allow the children to play with the Dobot Magician. Monitor the robotic arm while it is running and power off it once the movement is complete.

Figure 5.86 Select the Laser

Step 2 Adjust the laser focus.

Press and hold the unlock button on the Forearm to move the robotic arm to raise and lower the height of the laser kit until the laser is the brightest with a smallest possible spot size. When the laser power level is high enough, the laser beam can burn and cut the paper. After getting a pretty good focus, unselect **Laser** on the **Operation Panel** page to turn off the laser, as shown in Figure 5.87.

Figure 5.87 Unselect the Laser

• If you cannot set the laser to be at its minimum focus, it's probably because the focal length is long. To shorten the focal length, slightly turn the sliver lens screw (as shown in Figure 5.88) on the bottom of the laser kit.

Figure 5.88 Adjust the focus

• The point marked by a red box, as shown in Figure 5.89, corresponds to the position of the laser kit of the Dobot Magician. This point changes its position only within the annular area when the robotic arm moves.

Figure 5.89 The point corresponding to the laser kit of the robotic arm

Step 3 Click **AutoZ** on the **LaserEngraving** page to obtain and save the current value of the Z axis.

Once this step is complete, the next time you start to engrave, directly import an image file without adjusting the position of the laser kit, and click **SyncPos**, and then click **Start** to start engraving on the paper, as shown in Figure 5.90.

Figure 5.90 Lock the height of engraving

NOTE

The value of Z axis is the **PenDown** parameter. This parameter can be set by selecting **Setting** > **LaserEngraving** > **PenDown**, as shown in Figure 5.91. If the effect of engraving is not satisfactory, slightly raise and lower the height of the laser kit or directly change the value of **PenDown**.

```
Issue V1.9.0 (2020-07-23)
```

Figure 5.91 Set the PenDown parameters

Step 4 Click SyncPos.

The Dobot Magician automatically moves above the position of the start point of the laser-engraving.

Step 5 Click Start to start engraving on the paper.

When engraving, click **Pause** to pause the engraving and **Stop** to halt the engraving. Figure 5.92 shows the effect of the laser-engraving.

Figure 5.92 The effect of laser-engraving

Issue V1.9.0 (2020-07-23)

User Guide

5.7 Controlling with your Hand Gesture

You can use the **LeapMotion** function module of the DobotStudio to perform tasks, for example, grab or suck an object with your hand gesture.

5.7.1 Installing a Leap Motion Controller

Prerequisites

- The Leap Motion controller (a hand gesture controller) has been obtained.
- The Leap Motion driver software has been obtained. Download the Windows version, as shown in Figure 5.93, from the https://www.leapmotion.com/setup/desktop/windows.

| | DOWNLOAD FOR WINDOWS |
|---------|--|
| Dive in | to the future of VR with our Orion beta software |
| | DEVELOPER SDK + |
| | Or download our V2 software |
| | for Windows, Mac, or Linux. |
| | Minimum system requirements |

Figure 5.93 Download the Leap Motion driver software for Windows

Procedure

Step 1 Connect a Leap Motion controller to your computer with a USB cable, and put it on the work surface with its face up, as shown in Figure 5.94.

Figure 5.94 Connect the Leap Motion controller to your computer

Step 2 Install the Leap Motion driver software by following the on-screen instructions, as shown in Figure 5.95.

| Issue V1.9.0 (2020-07-23) | User Guide | Copyright © Yuejiang Technology Co., Ltd. |

| | 02 | |

Figure 5.95 The Leap Motion Installation Interface

5.7.2 Leap Motion Demo

You can move or sort an object with the LeapMotion function. This topic introduces how to move a small cube with a hand gesture.

Prerequisites

- The Dobot Magician is powered on and connected to your computer.
- The suction cup kit has been installed. For details, see 5.2.1 Installing a Suction Cup Kit.

Procedure

Step 1 Launch the DobotStudio, and click Connect to connect to the Dobot Magician.

Step 2 Click LeapMotion, as shown in Figure 5.96.

Figure 5.96 Click LeapMotion

| Issue V1.9.0 (2020-07-23) | User Guide | Copyright © Yuejiang Technology Co., Ltd |
|---------------------------|------------|--|
| | | |

Step 3 Click Setting on the DobtStudio page, as shown in Figure 5.97.

Figure 5.97 Click Setting

Step 4 Click **Leap Motion**, as shown in Figure 5.98. Set the parameters, as shown in Table 5.12, and click **OK**.

| High performance/Low performance | Choose a performance mode suitable for your computer. Select the Low performance (default) for the low configuration computer to prevent video delay |

Table 5.12 Set the parameters of the Leap Motion function

Step 5 Choose SuctionCup as the end-effector on the DobotStudio page, and click Start to control the Dobot Magician with your hand gesture. To maintain the Dobot Magician in a stable state, move your hand into the workspace of the Leap Motion controller while keeping your palm upward. And turn your palm down, and then move your hand above this area to control the Dobot Magician.

I NOTE

Move your hand in the workspace of the Leap Motion controller to control the Dobot Magician to perform a particular task, as shown in Table 5.13.

| Table 5.13 | The robotic arm | 's movement created | d with your hand gesture | |
|------------|-----------------|---------------------|--------------------------|--|

| Clench your fist | Control the air pump to suck air |
| Unclench your fist | Turn off the air pump |

- **Step 6** Put a small cube on the work surface in the workspace of the Dobot Magician, such as point A, and use the hand gesture to move robotic arm above the cube until it's close to the cube.
- Step 7 Clench your fist to control the air pump to suck the small cube, and move your fist to make Dobot Magician take the cube to another position while clenching your fist, such as position B, and then unclench your fist to turn off the air pump to drop the cube.
- **Step 8** Turn your palm upward and click **Stop** to stop the hand control.

5.8 Controlling with your Mouse

| Issue V1.9.0 (2020-07-23)User GuideCopyright © Yuejiang Technology Co |
|---|
|---|

You can use the **Mouse** function module of the DobotStudio to perform tasks, for example, grab or suck an object with your mouse. This topic introduces how to move a small cube with a mouse.

Prerequisites

- The Dobot Magician is powered on and connected to your computer.
- The suction cup kit has been installed. For details, see 5.2.1 Installing a Suction Cup Kit.

Procedure

Step 1 Click Mouse, as shown in Figure 5.99.

Figure 5.99 Click Mouse

Step 2 Choose **SuctionCup** as the end-effector on the **DobotStudio** page, as shown in Figure 5.100.

Step 3 Click Setting > Mouse, as shown in Figure 5.101. Set the parameters. For details about the parameters, please see Table 5.14.

| 🤨 Mouse Setting | | | | × |

Figure 5.101 Set the parameters of mouse control

| Table 5.14 | Set the parameters of mouse control |
|------------|-------------------------------------|
|------------|-------------------------------------|

| Parameters | Description |
|--|---|
| Speed | The velocity percentage of the Dobot Magician: Unit: % Value range: 1 - 100 Default value: 50 |
| Scale | The scale of the Dobot Magician: Unit: % Value range: 1 - 100 Default value: 100 |
| High performance/Low performance | Choose a performance mode suitable for your computer. Select Low performance (default) for the low configuration computer to prevent video delay |

- Step 1 Put a small cube on the work surface in the workspace of the Dobot Magician, such as point A.
- Step 2 Press V to enable the mouse control of the Dobot Magician. Press and hold the left mouse button to drag the mouse within the annular area to move the robotic arm, as shown in Figure 5.102.

MNOTICE

Do not move the mouse outside the annular area. If not, the robotic arm reaches its limited position. In this case, drag the mouse to into the annular area.

Figure 5.102 Move the robotic arm in the red annular area

Step 3 Move the Dobot Magician above the cube by dragging the mouse and then place it close to the cube.

NOTE

For details on how to use the mouse to control the robotic arm on the **Mouse** page, see Table 5.15.

| Mouse action | Robotic arm's movement |
|--|---|
| Move your mouse front, back, right, or left | The robotic arm moves accordingly |
| Scroll the mouse wheel up or down | The robotic arm moves accordingly |
| Press and hold the left mouse button | Suction cup: the air pump sucks air in Gripper: increase holding force |
| Release the left mouse button | Suction cup: the air pump is powered off Gripper: open |
| Right-click the mouse button | Gripper: close |

Table 5.15 The robotic arm's movement created with your mouse

- **Step 4** Press and hold the left mouse button to control the air pump to suck air to move the mouse to drag the robotic arm to take the cube to another position, such as point B, and release the left mouse button, and the air pump stops working to drop the cube here.
- Step 5 Press V or ESC to disable the mouse control.

5.9 Operating 3D Printing

After installing 3D printing kit, you can import 3D module into the 3D printing software for 3D printing. Figure 5.103 shows the 3D printing process.

Figure 5.103 3D printing process

During 3D printing, the 3D printing control software is required. You can use **Repetier Host** or **Cura** software for 3D printing.

- **Reptier-Host: Reptier-Host** can slice with the third party slicing (such as CuraEngine, Slic3r, etc), check and modify **G-Code**, control 3D printing manually. More parameter settings make **Reptier-Host** very flexible.
- **Cure**: The slicing of **Cura** is fast and stable. It has strong inclusiveness to 3D model structure and less parameter settings.

This section uses Windows as an example to describe how to perform 3D printing with **Repetier Host** and **Cura**. For Mac OS, only **Cura** is supported.

5.9.1 Installing 3D Printing Kit

3D printing kit contains extruder, hot end, motor cable, filament, and filament holder as shown in Figure 5.104.

Figure 5.104 3D printing kit

Procedure

Step 1 Press down the lever on the extruder, and push down the filament to the bottom of the hole via the pulley, as shown in Figure 5.105.

Issue V1.9.0 (2020-07-23)

User Guide 91

Figure 5.105 Push down the filament

Step 2 Connect the end of the PTFE tube to the hot end and push it down to the bottom of the hot end, and connect the other end to the extruder, as shown in

Figure 5.106 Connect extruder and hot end

Step 3 Insert the filament into the PTFE tube and push it down to the bottom of the hot end.

> Please make sure that the PTFE tube has been pushed down to the bottom of the hot end. Otherwise, it will cause abnormal discharge.

Issue V1.9.0 (2020-07-23)

User Guide Copyright © Yuejiang Technology Co., Ltd.

Step 4 Fix the hot end on the Dobot Magician with clamp fixing screw, as shown in Figure 5.107.

Figure 5.107 Fix hot end

Step 5 Insert the heating cable to the interface 4 on the Forearm, the fan cable to the interface 5 and the thermistor cable to the interface 6, as shown in Figure 5.108.

Figure 5.108 Connect hot end to the Forearm

Step 6 Connect the extruder to the **Stepper1** interface on the back of the base with motor cable, as shown in Figure 5.109.

Figure 5.109 Connect with extruder

Step 7 Place the filament and the extruder to the filament holder, as shown in Figure 5.110.

Issue V1.9.0 (2020-07-23) User Guide Copyright © Yuejiang Technology Co., Ltd.

Figure 5.110 Place filament and extruder to the Filament holder

5.9.2 Operating Repetier Host

Repeiter Host has been built into DobotStudio. After burning 3D printing firmware, the **Repetier Host** page will be displayed automatically.

Prerequisites

- The 3D printing model has been prepared.
- The printing platform has been prepared and please place it in the workspace of the Dobot Magician.
- Dobot Magician has been powered on.
- Dobot Magician has been connected to DobotStudio successfully (Only USB connection is supported).
- The 3D printing kit has been installed.

5.9.2.1 Burning Firmware

Procedure

Step 1 Click 3DPrinter on the DobotStudio page.

The **3D Printing FM** page is displayed, as shown in Figure 5.111.

Figure 5.111 Burn firmware

Step 2 Click Confirm to start burning 3D printing firmware.

After burning 3D printing firmware, the **Repetier Host** page is displayed automatically, as shown in Figure 5.112.

If the LED indicator on the base turns red, it indicates that the connection of the 3D printing kit is abnormal.

Please DO NOT operate or turn off Dobot Magician when burning firmware, to avoid machine damage.

Figure 5.112 Repetier Host page

If the current firmware is set for 3D printing when operating 3D printing, you can click **Connect** directly on the DobotStudio page. And then Click **OK** on the **Select tool** page to switch to **Repetier Host**, as shown in Figure 5.113.

Figure 5.113 Switch into 3D printing automatically

5.9.2.2 Performing 3D Printing

Procedure

Step 1 Set printing parameters.

Printing parameters only need to be set for the first time.

```
Issue V1.9.0 (2020-07-23)
```

User Guide Copyright © Yuejiang Technology Co., Ltd.

1. Click **Printer Settings** on the top right corner of the **Pepetier Hos**t page.

The **Printer Settings** page is displayed.

2. Set the corresponding parameters on the **Connection** tab as shown in the red box of Figure 5.114. The other parameters are set by default.

Figure 5.117 Printer shape settings

- 7. Click OK
- Step 2 Click Connect on the Repetier Host page to connect Dobot Magician.

After the connection is successful, the current heating temperature will be shown on the below of the **Repetier Host** page, as shown in Figure 5.118.

Figure 5.118 Connect to Dobot Magician

Step 3 Text extruder.

Before printing, you need to test the extruder to check whether the melted filament flows from the nozzle of the extruder.

The temperature of the extruder should be above 170°C. Dobot Magician will not start 3D printing until the filament is in the melting state. So you need to heat the extruder first.

1. Set the heating temperature to 200°C on the Manual Control tab of the Repetier

Host page and click , as shown in Figure 5.119.

The heating rod will produce high temperature up to 250°C, please be careful. Do not let children play with it alone. The process needs to be monitored when it is running. After the process is completed, please turn off the equipment promptly.

Figure 5.119 Heat the extruder

2. Click the extruder feeder when the heating temperature is up to 200°C and feed up to10mm-30mm, as shown in Figure 5.120.

Figure 5.120 Extrude filament

If the melted filament flows from the nozzle of the extruder, the extruder is working properly.

If the filament extrusion is in the opposite direction. Please remove the filament, and turn the extruder around, then re-push down the filament.

Step 4 Adjust the printing space and get the printing coordinates.

During printing, if the distance from Dobot Magician to the printing platform is too large or too small to paste the first layer, it can lead to the nozzle blockage. For increasing the stickiness of the first layer, placing a masking paper on the platform is recommended.

- 1. Press the **Unlock** key on the Forearm and drag Dobot Magician to make the printing head contact the surface of the masking paper (The distance between the printing head and the surface of the masking paper is the thickness of a sheet of A4 paper), then release the **Unlock** key.
- 2. Input command **M415** on the **G-Code** command window and press **Enter** to get the current coordinates, as shown in Figure 5.121.

| Issue V1.9.0 (2020-07-23) U | Jser Guide | Copyright © Yuejiang Technology Co., Ltd. |
|-----------------------------|------------|---|
| Issue V1.9.0 (2020-07-23) | ser Guide | Copyright © Yuejiang Technology Co., Ltd. |

Also, you can press the Key button on the bace of the base to get the current coordinates.

Figure 5.121 Input M415

NOTE

If you cannot find the G-Code command window, please click EASY to close Easy Mode, as shown in Figure 5.122.

Figure 5.122 Easy mode

Step 5 Click Load to import the prepared 3D printing model, as shown in Figure 5.123. You can also load 3D printing model which are DobotStudio, the loading path is

Installation directory\DobotStudio\attachment\3dModeStl.

The format of 3D model is **STL**. You can design 3D model and transform it into STL format.

Figure 5.123 Import 3D printing Model

After importing the model, you can center, zoom, or rotate the model on the **Object Placement** page, as shown in Figure 5.124.

Step 6 Set slicing parameters and slice up.

You need to set the slicing parameters before first printing.

3. Select Slic3r from Slicer on the Slicer tab of the Repetier Host page, and click Configuration, as shown in Figure 5.125.

Figure 5.125 Select slicer

The Slic3r page is displayed, as shown in Figure 5.126.

Figure 5.128 Save configuration file

 Click Slici with Slic3r on the Slicer tab of the Repetier Host page, as shown in Figure 5.129.

Figure 5.129 Start to slice

7. Click **I** on the top left corner of the **Repetier Host** page to print.

Figure 5.130 Start printing

Here we choose vase mode to print, and the product after printing as shown in Figure 5.131.

Figure 5.131 The product of printing

5.9.3 Operating Cura

If you need to use Cura software for 3D printing, please launch the Cura software after burning firmware.

Prerequisites

• Slice software **Cura** has been installed.

The download path is https://ultimaker.com/en/products/ultimaker-cura-software/list.

Please download the recommended version **V14.07**. The way how to install and use is not descripted in this topic.

- The 3D printing model has been prepared.
- The printing platform has been prepared and please place it in the workspace of Dobot Magician.
- Dobot Magician has been powered on.
- Dobot Magician has been connected to DobotStudio successfully (Only USB connection is supported).
- The 3D printing kit has been installed.

5.9.3.1 Burning Firmware

Procedure

Step 1 Click 3DPrinter on the DobotStudio page.

The **3D Printing FM** page is displayed, as shown in Figure 5.132.

| 2 3D Printing FM | × |
|--------------------------------------|---|
| COM4 | |
| Current Firmware:Dobot-V3.6.1 | |
| Burning Firmware:RepetierHost-V4.6.0 | |
| Status: Ready to update firmware | |
| 0% | |
| | |
| | |
| | |
| | |
| | |
| Confirm Quit | D |

Figure 5.132 Burn firmware

Step 2 Click **Confirm** to start burning 3D printing firmware.

After burning 3D printing firmware, if the LED indicator on the base turns red, it indicates that the connection of the 3D printing kit is abnormal.

Please DO NOT operate or turn off Dobot Magician when burning firmware, to avoid machine damage.

5.9.3.2 Performing 3D Printing

Procedure

- Step 1 Launch Cura software.
- **Step 2** Set slicing parameters.
 - 1. Select **Machine > settings** on the Cura page.

The Machine settings page is displayed.

2. Set the corresponding parameters on the Machine settings and click **OK**, as shown in Figure 5.133. Table 5.16 lists the values of the parameters that need to be set. The other parameters are set by default.

| Machine settings | | × |
|----------------------------------|----------------------------|--------------------------------|
| Ultimaker2 | | |

Figure 5.135 Configuration sample

Dobot-2.0-Vase-Cura.ini is used for printing a thin-walled vase, while Dobot-2.0-Cura.ini is used for the filling, the filling rate is 20%.

4. Click (the **Open 3D model** page is displayed, and select the 3D printing

model prepared.

The format of 3D model is STL. You can design 3D model and transform it into STL format.

After importing the model, click the model itself, you can center, zoom or rotate, and so on, as shown in Figure 5.136.

Figure 5.136 Zoom and rotate

to connect with Dobot Magician.

the top corner of the window, as shown in Figure 5.137.

The printing window is displayed and the current printing temperature is shown on the top corner of the window, as shown in Figure 5.137.

Figure 5.137 Printing window

6. Set Temperature to 200 and press down Enter to heat the extruder.

The temperature of the extruder should be above 170°C. Dobot Maigicain will not start 3D printing until the filament is in the melting state. So you need to heat the extruder first.

The heating rod will produce high temperature up to 250°C, please be careful. Do not let children play with it alone. The process needs to be monitored when it is running. After the process is completed, please turn off the equipment promptly.

Step 3 Test the extruder.

Before printing, you need to test the extruder to check whether the melted filament flows from the nozzle of the extruder.

Click the feedstock extruder or click the given stepper, such as **10**, **1**, **0.1** (**10** is recommended) on the **Operational** page and feed up to 10mm-30mm, as shown in Figure 5.138.

Figure 5.138 Click feedstock extruder

If the melted filament flows from the nozzle of the extruder, the extruder is working properly.

MNOTICE

If the filament extrusion is in the opposite direction, please remove the filament, and turn the extruder around, then re-push down the filament.

Step 4 Adjust the printing space and get printing coordinates.

During printing, if the distance from Dobot Magician to the printing platform is too large or too small to paste the first layer, it can lead to the nozzle blockage. For increasing the stickiness of the first layer, placing a masking paper on the platform is recommende.

- 1. Press the **Unlock** key on the Forearm and drag Dobot Magician to make the printing head contact the surface of the masking paper(The distance between the printing head and the surface of the masking paper is the thickness of a sheet of A4 paper), then release the **Unlock** key.
- 2. Input command **M415** on the lower right of the **Operational** page to get the current coordinates, as shown in Figure 5.139.

Also, you can press the **Key** button on the bace of the base to get the current coordinates.

Figure 5.139 Input command M415

Step 5 Click **Print**, Dobot Magician moves to the printing origin (System setting) and starts printing.

5.10 Calibration

5.10.1 Base Calibration

The base Encoder has been calibrated before being shipped out. Generally, the J1-coordinate is 0 $^{\circ}$ after homing, where the homing point is the system default. Namely, the Forearm is located at the middle in front of the base.

If the J1-coordinate is not 0 °(error range: 1° -3°) after homing, you need to re-calibrate the base Encoder.

Prerequisites

- The writing and drawing kit has been installed. For details, please see 5.4.1 Installing a Writing and drawing kit.
- Dobot Magician has been powered on.
- Dobot Magician has been connected to DobotStudio successfully.
- The sensor calibration board has been prepared.

Procedure

Step 1 Place the Dobot Magician at the right position on the sensor calibration board, as shown in Figure 5.140.

Figure 5.140 Location of Dobot Magician

Step 2 (Optional) Set the homing point and make the nib contact the surface of the calibration board.

This step is used for observing the nib position on the calibration board when moving J1-axis in **Step 5**, to improve calibration accuracy.

1. Click **Teaching&Playback** on the DobotStudio page.

The **Teaching&Playback** page is displayed.

2. Press the **Unlock** key on the Forearm and drag Dobot Magician to make the nib contact the surface of the calibration board, then release the **Unlock** key.

The coordinates of this point will be displayed on the **Teaching&Playback** page.

3. Select this point and right-click **SetHome**, as shown in Figure 5.141.

Figure 5.141 Set homing position

Step 3 Click **Setting > Base Calibration** on the DobotStudio page.

The **Base Calibration** page is displayed.

Step 4 Click Next on the Base Calibration page.

Dobot will start homing. Please ensure that there are no obstacles in the workspace during homing.

Step 5 Click +J1 or -J1 to make the nib at a point on the line between A3 and B3 on the calibration board, as shown in Figure 5.142 and Figure 5.143.

If the speed is too fast when moving J1-axis, you can drag **Speed** slider to adjust speed.

| Ø Base Callbration | | |

Figure 5.142 Move J1-axis

Figure 5.143 Nib position

Step 6 Click Calibration to start calibrating the base Encoder.

You can check the J1-coordinate on the **Operation Panel** page, as shown in Figure 5.144.

Figure 5.144 J1-coordinate

5.10.2 Sensor Calibration

The angle sensors of the Forearm and Rear Arm have been calibrated before being shipped out. Generally, the Z-coordinate will remain the same when moving Dobot Magician in the same horizontal plane. If changed, you need to recalibrate the angle sensors by manual levelling or auto levelling to improve the positioning accuracy.

- **Manual Levelling**: It is more accurate to calibrate manually with DobotStudio, sensor calibration board, and writing and drawing kit, which is suitable for the application scenarios with high requirements for absolute positioning accuracy.
- **Auto Levelling**: It is simple and quick to calibrate automatically with DobotStudio and auto-levelling tool, which is suitable for the application scenarios without high requirements for absolute positioning accuracy, such as writing and drawing, 3D printing.

5.10.2.1 Manual Levelling

Prerequisites

- Dobot Magician has been powered on.
- Dobot Magician has been connected to DobotStudio successfully.
- The sensor calibration board has been prepared.

Procedure

Step 1 Place the Dobot Magician at the right position on the sensor calibration board, as shown in Figure 5.145.

Figure 5.145 Location of Dobot Magician

Step 2 Click **Setting > Manual** Levelling on the DobotStudio page.

The Manual Levelling page is displayed.

Step 3 Click Next on the Manual Levelling page.

Dobot Magician will finish the auto-compensation of the angle senor coefficients of

the Forearm and Rear Arm move according to the system settings. The result is as shown in Figure 5.146.

MNOTICE

Please remove all end-effectors from Dobot Magician before calibrating

Step 4Click Next and set Angle Precision, Distance Precision, Result Range.In this step, please keep the default values, as shown in Figure 5.147.

Figure 5.147 Set precisions

- Step 5 Click Next and follow the instructions on the Manual Levelling page to move Dobot Magician to the first calibrated point. If the calibrated point is A3 on the Calibration board.
 - 1. Install the writing and drawing kit. For details, please see 5.4.1 Installing a Writing and drawing kit.
 - 2. Press the **Unlock** key on the Forearm and drag Dobot Magician to make the nib near the **A3** point on the calibration board, then release the **Unlock** key.
 - 3. Click coordinate buttons on the **Manual Levelling** page (as shown in Figure 5.148) to make the nib align to the center of A3 point on the calibration board, as shown in Figure 5.149.

If the speed is too fast when clicking coordinate buttons, you can drag **Speed** slider to adjust speed.

5.10.2.2 Auto Levelling

Prerequisites

- Dobot Magician has been connected to a PC via USB cable.
- Dobot Magician has been connected to the power adapter.
- The auto-levelling tool has been obtained, as shown in Figure 5.154.

Figure 5.154 Auto-levelling tool

Procedure

Step 1 Place Dobot Magician on the flat platform.

Please ensure that the platform is flat. Or, the auto levelling will be failed.

Step 2 Fix the auto-levelling tool on the Dobot Magician with clamp fixing screw, as shown in Figure 5.155.

Figure 5.155 Fix auto-levelling tool

Step 3 Insert the cable of the auto-levelling tool to the interface 2 on the Forearm, as shown in Figure 5.156.

Figure 5.156 Insert the cable of the auto-levelling

Step 4 Power on Dobot Magician and connect it to DobotStudio.

Step 5 Click **Setting > Auto Levelling** on the DobotStudio page.

| Issue V1.9.0 (2020-07-23) | User Guide | Copyright © Yuejiang Technology Co., Ltd. |

| L VI 0.0 (2020.07.22) | | |

The Auto Levelling page is displayed, as shown in Figure 5.157.

Please ensure that there are no obstacles in the workspace during auto levelling.

Figure 5.157 Auto levelling page

Step 6 Click Start on the Auto Levelling page.

Dobot Magician starts auto levelling. The levelling process will takes about 2 minutes. The result is shown as Figure 5.158.

If the auto levelling is failed, please check if the platform is flat and try again.

Figure 5.158 Auto levelling result

5.10.3 Homing

Dobot Magician has been calibrated before being shipped out. If the Dobot Magician has been hit or the motor has lost step, leading data abnormal, you need to operate homing to improve the positioning accuracy.

Prerequisites

- Dobot Magician has been powered on.
- Dobot Magician has been connected to DobotStudio successfully.

Procedure

Click Home on the DobotStudio page, as shown in Figure 5.159.

- Please remove the end-effector from the Dobot Magician before homing.
- Please ensure that there are no obstacles in the workspace during homing.

| | Setting Horize | |

5.11 Connecting with WIFI Kit

You can connect Dobot Magician to a PC via WIFI kit without USB cable, making Dobot Magician and PC in the same WLAN. Figure 5.161 shows the WIFI kit.

Figure 5.161 WIFI kit

Prerequisites

- Dobot Magician has been connected to a PC via USB cable.
- Dobot Magician has been connected to the power adapter.
- The WIFI name and password have been obtained and must be the same as that of PC.

Procedure

Step 1 Connect the WIFI kit to the UART interface on the base, as shown in Figure 5.162.

Figure 5.162 Connect with WIFI kit

MNOTICE

Please turn off the Dobot Magician completely first before connecting or disconnecting external equipment. Or, it causes serious damage to your device.

Step 2 Press down the power button to turn on the Dobot Magician.

After turning on, there are two short beep sounds and the blue LED indicator on the WIFI module is on.

- Step 3 Select the corresponding serial port from the serial drop-down list, and click Connect.
- Step 4 Click Setting > Wi-Fi.

The Set Dobot Wi-Fi page is displayed.

Step 5 Set the related parameters on the Set Dobot Wi-Fi page.

In this topic, please select **Dynamic Host Configuration Protocol (DHCP)** and set **SSID** and **Password** to obtain the IP address of Dobot Magician, as shown in Figure 5.163.

If you unselect **Dynamic Host Configuration Protocol (DHCP)**, you need to set **IP address**, **Netmask**, **Gateway**. For details, please see Table 5.17.

| Set Dobot WI-FI | | | | | |
|---|--|------------|------------|----------|------|
| General | SSID | Dol | oot | | |
| Update | Password | 123 | 456 | | |
| Firmware | Dynamic Host Configuration Protocol (DHCP) | _ | | | |
| Wi-Fi | IPAddress Netmask | 192 255 | 168 255 | 0 255 | 126 |
| Sensor and Ease | Gateway | 192 | 168 | 0 | 1 |

Figure 5.163 Set WIFI

| Table 5.17 | Parameter description |
|------------|-----------------------|
| 10010 0.17 | |

| Parameter | Description |
|----------------------------|--|
| SSID | Set WIFI name |
| | The WIFI name and password have been obtained and must be the same as that of PC |
| Password | Set WIFI password |
| Dynamic Host Configuration | Whether to select DHCP |
| Protocol (DHCP) | Yes: Only set SSID and Password |
| | No: Only set IPAddress, Netmask and Gateway |
| IPAddress | Set the IP address of Dobot Magician. The IP address of Dobot Magician and |
| | the PC must be in the same WLAN without conflict. |
| Netmask | Set subnet mask |
| Gateway | Set gateway |
| DNS | Set DNS |

Step 6 Click **OK**. Issue V1.9.0 (2020-07-23)

User Guide

e Copyright © Yuejiang Technology Co., Ltd.

About 5 seconds later, the green LED indicator on the WIFI module is on, indicating that the Dobot Magician has been connected with WLAN.

- Step 7 Click Disconnect on the left pane of the DobotStudio page.
- **Step 8** After 2 seconds later, select the IP address from the drop-down list on the upper left pane of the DobotStudio page and click **Connect**, as shown in Figure 5.164.

Figure 5.164 IP address of Dobot Magician

After the connection is successful, you can control Dobot Magician without USB cable.

5.12 Connecting with Bluetooth Kit

Dobot Magician can be connected to smart phone with Bluetooth. Figure 5.165 shows the Bluetooth kit. Please download the matched DobotStudio APP from the website <u>https://cn.dobot.cc/downloadcenter.html?sub_cat=69#sub-download</u>.

Figure 5.165 Bluetooth kit

Prerequisites

- Dobot Magician has been connected to the power adapter.
- The DobotStudio APP has been downloaded.

Procedure

Step 1 Connect the Bluetooth kit to the UART interface on the base, as shown in Figure 5.166.

Figure 5.166 Connect with Bluetooth kit

Please turn off the Dobot Magician completely first before connecting or disconnecting external equipment. Or, it causes serious damage to your device.

Step 2 Press down the power button to turn on the Dobot Magician.

After turning on, there are three short beep sounds and the blue LED indicator on the Bluetooth module is on and the green one is blinking.

Turn on the Bluetooth and launch DosbotStudio APP on your phone. And click **Connect** to connect with Dobot Magician.

This topic only describes how to connect Bluetooth kit. For details how to operate Dobot Magician with DobotStudio APP, please see https://www.youtube.com/watch?v=kyeXwuf17IY.

5.13 Operating Blockly

Blockly is a programming platform based on Google Blockly. You can program through the puzzle format, which is straightforward and easy to understand.

Prerequisites

- Dobot Magician has been powered on.
- Dobot Magician has been connected to DobotStudio successfully.

Procedure

Step 1 Click **Blockly** on the DobotStudio page.

The **Blockly** page is displayed.

```
Issue V1.9.0 (2020-07-23)
```

User Guide 135

Step 2 Drag the blockly module on the left pane of the **Blockly** page to program, as shown in Figure 5.167.

| arga Joga Nilli | ۲. | Constanting Second | | First segare already no. 10 already | |
|---|---|---------------------------------------|----------------------------|--|--------|
| 95 mar natiles exitum | | Disarte A signal 7 a Disarte (2) : | 101 - = #201 101 - 4120 | | |
| REARCH Distric Cloaking Morikov 190 | | Destro All a | 2 | Characteristic Constitution of the State of | R # II |
| Anthona | and the second se | | | Age to MC and a set of the set of | |

Figure 5.167 Blockly graphic programming

Table 5.18 lists the description of blockly module.

| No. | Description |
|-----|--|
| 1 | The selection area of blockly module, including logistic, loop, math, and Dobot API. You can program by dragging them to the window. |
| 2 | The window of blockly programming |
| 3 | The running log of Dobot Magician |
| 4 | The corresponding codes of the blockly module on the programming window |

The demo in Figure 5.167 is described as follows.

- 1. Set the end-effector as Gripper.
- 2. Set the loop number as 3 and make the Z-axis move back and forth 3 times.
- 3. Set the pause time as 3.
- **Step 3** Click **Save** on the **Blockly** page.

The Saving Blockly file page is displayed.

- Step 4 Input the use-defined name and the saving path, and click Save. The default path of the programing file is *Installation directory*/DobotStudio/config/bystore. Please replace the path based on site requirements.
- Step 5 Click Start on the Blockly page, and Dobot Magician will move according to the program.

5.14 Scripting

You can control Dobot Magician over scripting. Dobot Magician supports various API, such as velocity/acceleration setting, motion mode setting, and I/O configuration, which uses Python language for secondary development. For details about the Dotob Magician API interface and function description, please see *Dobot Magician API Description*.

The download path is https://www.dobot.cc/downloadcenter.html?sub_cat=72#sub-download.

Prerequisites

- Dobot Magician has been powered on.
- Dobot Magician has been connected to DobotStudio successfully.

Procedure

Step 1 Click **Script** on the **DobotStudio** page.

The **Script** page is displayed.

Step 2 Write a script.

You can call the interface by double-clicking on the left pane of the **Script** page, the corresponding interface will be displayed on the middle pane, as shown in Figure

5.168. You can also click icon of the corresponding interface to view the way how to set the parameters. The scripting examples (including Jog, PTP, and Pallet) can refer to *Installation directory*/**DobotStudio**/config/ststore/.

Figure 5.168 Write a script

Step 3 Click Save on the Script page.

The Saving Scrip File page is displayed.

Step 4 Input the use-defined name and the saving path, and click **Save**.

The default path of the script is *Installation directory*/DobotStudio/config/ststore. Please replace the path based on site requirements.

Step 5 Click Start, and Dobot Magician will move according to the script file.The running log will be displayed on the lower pane of the Script page for checking.

5.15 Operating Stick Controller Kit

Dobot Magician can be controlled by stick controller kit without DobotStudio. Figure 5.169 shows the stick controller kit. From left to right: Stick controller, USB Host module, USB cable (used for charging stick controller), Transceiver.

Figure 5.169 Stick controller kit

- Please don't connect Dobot Magician to DobotStudio when operating the stick controller.
- Please turn off the Dobot Magician completely first before connecting or disconnecting external equipment. Otherwise, it causes serious damage to your device.

Prerequisites

Dobot Magician has been connected to the power adapter.

Procedure

- **Step 1** Connect the transceiver to the USB module.
- **Step 2** Connect the USB Host module to the UART interface on the base, as shown in Figure 5.170.

Figure 5.170 Connect with USB Host module

- Step 3 Press down the power button to turn on the Dobot Magician.The blue LED indicator on the USB Host module is on. After turning on, there are four short beep sounds and the green one is on.
- Step 4 Press down the power button on the stick controller, as shown in Figure 5.171.The red LED indicator on the middle of the stick controller is blinking, indicating that the Dobot Magician can be controlled by the stick controller.

Figure 5.171 Power button of the stick controller

| Button | Function | | |
|------------------------|---|--|--|

| Left stick: Left/right | Cartesian coordinate system mode: Dobot Magician moves along Y-axis in the positive/negative direction Joint coordinate system mode: Dobot Magician rotates along J2-axis in the positive/negative direction |
| Right stick: Front/back | Cartesian coordinate system mode: Dobot Magician moves along Z-axis in the positive/negative direction Joint coordinate system mode: Dobot Magician rotates along J3-axis in the positive/negative direction |
| Right stick: Left/right | Cartesian coordinate system mode: Dobot Magician rotates along R-axis in the positive/negative direction Joint coordinate system mode: Dobot Magician rotates along J4-axis in the positive/negative direction |

5.16 Multiplexed I/O Demo

The addresses of the I/O interfaces in Dobot Magician are unified. Most of I/O interfaces have multiple functions. For details, please see 4.3 Multiplexed I/O Interface Description.

You can set I/O interfaces on the advanced **Teaching&Playback** page to control the peripheral equipment, as shown in Figure 5.172.

| Eliminavi I | Rena 1 | | | -v - c | Contrast line | |

| | | |

Now, demos of level output, level input, and PWM output are given below.

5.16.1 Level Output

Normally, air pump can be controlled by the I/O interfaces. The I/O **11** controls its intake (High level) and outtake (Low level) and the I/O **16** controls its start-stop. Table 5.20 lists the multiplexed descriptions of I/O **11** and I/O **16**.

| I/O addressing | Voltage | Level Output | PWM | Level Input | ADC |
|----------------|---------|--------------|-----|-------------|-----|
| 11 | 3.3V | \checkmark | | - | - |
| 16 | 12V | \checkmark | - | - | - |

Table 5.20 Multiplexed I/O description

The I/O **11** and I/O **16** are located at the peripheral interface of the base, as shown in Figure 5.173.

Figure 5.173 Peripheral Interface on the base

Prerequisites

- The air pump has been connected to Dobot Magician. For details, please see 5.2.1 *Installing a Suction Cup Kit.*
- Dobot Magician has been powered on.
- Dobot Magician has been connected to DobotStudio successfully.

Procedure

Step 1 Select Pen from the end-effector drop-down list on the DobotStudio page, as shown in Figure 5.174.

| Issue | V190 | (2020-07-23) |
|-------|---------|--------------|
| 15500 | v 1.).0 | (2020-07-23) |

|----------------|-------------------|---------------------------|
| Easy Pro Speed | aching & Playback | SuctionCup Gripper Laser |
| Loop 1 Acc | - 50 +) Z | Pen Advanced |

Figure 5.174 Select end-effector

MNOTICE

Normally, If **SuctionCup** or **Gripper** is selected from the end-effector drop-down list after the air pump has been connected, the air pump will be controlled by the system. In this topic, we use I/O interfaces to control the air pump, so **SuctionCup** and **Gripper** cannot be selected, to avoid conflict.

Step 2 Click **Easy** icon on the **Teaching&Playback** page, as shown in Figure 5.175.

Step 3 Select IO_11, IO_16 and their corresponding Value on the Output pane, and click +Point.

"The saved point is displayed on the **Teaching&Playback** page, as shown in Figure 5.176.

If the intake is not obvious, please modify PauseTime of this saved point.

Figure 5.176 Saved point

- Step 4Select this point and click StepRun.The air pump is humming with intake.
- Step 5 Select IO_11, IO_16 and the corresponding Value of IO_16 on the Output pane, and click +Point.

The saved point is displayed on the **Teaching&Playback** page, as shown in Figure 5.177.

Figure 5.177 Saved point

144

Step 6 Select this point and click StepRun.

The air pump is humming with outtake.

5.16.2 Level Input

This topic also takes I/O 12 as an example.

Table 5.21 Multiplexed I/O description

| I/O addressing | Voltage | Level Output | PWM | Level Input | ADC |
|----------------|---------|--------------|-----|--------------|-----|
| 12 | 3.3V | - | - | \checkmark | - |

Prerequisites

- Dobot Magician has been powered on.
- Dobot Magician has been connected to DobotStudio successfully.
- The saved points list has been existed on the Teaching&Playback page.

Procedure

Step 1 Click **Easy** icon on the **Teaching&Playback** page, as shown in Figure 5.178.

Figure 5.178 Switch advanced function

- **Step 2** Select a saved point on the **Teaching&Playback** page.
- Step 3Select EIO11_Input on the Trigger pane, and set Condition and its Value.Here, Value only can be set to 0 or 1. 1: High level; 0: Low level.

Step 4 Click ADD, as shown in Figure 5.179.

Issue V1.9.0 (2020-07-23) User Guide Copyright © Yuejiang Technology Co., Ltd.

5.16.3 PWM OUTPUT

This topic also takes I/O 11 as an example.

Table 5.22 Multiplexed I/O description

| I/O addressing | Voltage | Level Output | PWM | Level Input | ADC |
|----------------|---------|--------------|-----|-------------|-----|
| 11 | 3.3V | \checkmark | | - | - |

Prerequisites

- Dobot Magician has been powered on.
- Dobot Magician has been connected to DobotStudio successfully.

Procedure

Step 1 Click Easy icon on the Teaching&Playback page, as shown in Figure 5.180.

Figure 5.180 Switch advanced function

Step 2 Select IO_11 on the Output pane, and click +Point, as shown in Figure 5.181.

Figure 5.181 Saved point

Step 3 Double-click EIO11 cell and select ... from the drop-down list.The EIO Setting page is displayed, as shown in Figure 5.182.

Figure 5.182 EIO setting

Step 4 Set **Frequency** (Unit: KHZ; Value range: 10HZ-1MHZ) and **DutyRatio** (0%-100%) on the **EIO Setting** page.

Appendix A Dobot Magician Homing Operation

Homing Procedure:

- Step 1 Turn on Dobot Maigcian, wait for about 20 seconds after green light is on, and then click Home on Dobot Studio page to make Dobot Magician execute homing operation.
- **Step 2** Blue light will flash during homing, and Dobot Magician will execute homing operation. Do not operate the Dobot until the green light is on.
- Step 3 Save points and download them to Dobot Magician. Click OK to wait downloading finished.

Figure 5.183 homing tip

Step 4 Disconnect USB cable and press down Key button to execute offline mode.

Playback Procedure:

If there are some points saved in Dobot Magician before, you can turn on Dobot Maigican directly, wait for about 20 seconds after green light is on, press down **Key** button for long time to execute homing operation, and then press down **Key** button again to execute offline mode.
